

Maintenance Painting of Steel Structures in Pulp and Paper Mills

Table of Contents

Preface	iii
CHAPTER 1: Scope, Fundamental Elements, and Condition Assessments	1.1
1.1. Scope and purpose	1.1
1.2. Fundamentals and economics	1.2
1.3. Essential program elements	1.3
1.4. Painted surface condition assessment	1.5
1.5. Miscellaneous hardware	1.6
1.6. Supplementary reading	1.6
CHAPTER 2: Pulp and Paper Mill Environments	2.1
2.1. Wood handling and debarking	2.3
2.2. Woodroom and chipping	2.3
2.3. Pulping	2.3
2.4. Pulp screening and washing	2.4
2.5. Bleaching	2.4
2.6. Papermaking	2.5
2.7. Finishing and warehousing	2.6
2.8. Pulping chemicals and soap/tall oil recovery	2.6
2.9. Chemical preparation and storage of purchased chemicals	2.7
2.10. Steam and power generation	2.7
2.11. Water and effluent treatment	2.7
CHAPTER 3: Surface Preparation Requirements and Standards	3.1
3.1. Introduction	3.1
3.2. Debris containment	3.2
3.3. Wet abrasive blasting	3.3
3.4. Hydro-blasting	3.3
3.5. Unconventional blasting methods	3.4
3.6. Additional considerations	3.5
CHAPTER 4: Paint Systems and Materials	4.1
4.1. Introduction	4.1
4.2. Systems for Class 1 condition (1-PM) (See Section 1.6)	4.2
4.3. Systems for Class 2 condition (2-CR) (See Section 1.6)	4.4
4.4. Systems for Class 3 condition (3-NS) (See Section 1.6)	4.5
4.5. Additional considerations	4.6
CHAPTER 5: Quality and Productivity	5.1
5.1. General	5.1
5.2. System and product specifications	5.1
5.3. Contractor requirements	5.2
5.4. Inspection requirements and procedures	5.5
5.5. Warranty considerations	5.8
CHAPTER 6: Special Considerations	6.1
6.1. Painting galvanized steel	6.1
6.2. Petrolatum-based tape and pastes	6.2
6.3. Hot surfaces	6.3
6.4. Coatings on concrete	6.3
APPENDIX A: Brief Description of Surface Preparation Standards	A.1
APPENDIX B: Characteristics of Generic Types of Coatings in Chapter 4	B.1
APPENDIX C: Testing for Soluble Salt Contamination on Surfaces	C.1
APPENDIX D: General Method for Column Base Structural Repair and Corrosion Protection	D.1
