

TABLE OF CONTENTS

Preface

Organization of the Text

Acknowledgements

List of Symbols

1. Nanocomposites Past and Future

- What Is a Nanocomposite?
- Nanocomposites Past
- Myths
- Nanocomposites Present
- Nomenclature
- Organization of the Text

SECTION I-COMPOSITE MATERIALS

2. Introduction to Solids

- Atomic and Molecular Solids
- The Role of Statistics in Materials
- Primary, Secondary and Tertiary Structure
- Transitions
- Effect of Scale
- References

3. Properties

- Physics of the Modulus
- Continuum Measurements
- Yield
- Fracture
- Rubbery Elasticity and Viscoelasticity
- Composites and Nanocomposites
- Surface Mechanical Properties
- Diffusion and Permeability
- References

4. Features of Nanocomposites

- Nanoreinforcements
- Matrix Materials
- Hazards of Particles
- References

SECTION II-NANOCOMPOSITES PROCESSING

5. Viscosity

- Types of Flow
- Viscosity
- Experimental Viscosity
- Non-Newtonian Flow
- References

6. Low-Viscosity Processing

- Solvent Processing
- Particle Behavior
- In Situ Polymerization
- Post-Forming
- Hazards of Solvent Processing
- References

7. Melt, High-Shear, and Direct Processing

- Melting and Softening
- Melt Processes with Small Shears or Low-Shear Shear-Rates Flow
- Melt Processes with Large Deformations or High-Shear Rates
- Thermo-Kinetic Processes
- References

SECTION III-NANOCOMPOSITES CHARACTERIZATION SCIENCE AND TECHNOLOGY

8. Introduction to Characterization

- Experiment Design
- Sample Preparation
- Imaging
- References

9. Structure Characterization

- Scales in Nanocomposites
- Texture
- Electromagnetic Energy
- Visualization
- Physicochemical Analysis
- References

10. Characterization of Physical Properties

- Identification
- Mechanical
- Surface Mechanical
- Exposure
- Barrier Properties
- Recipes and Standards
- References
