Table of Contents

Part One: Stone Groundwood.
I. Grinders.
II. Pulpstones.
III. Grinder Operation.
IV. Grinder Load Control.
V. Pulp Quality.

Part Two: Refiner Pulping.
VI. Introduction.
VII. Refiner Plates.
VIII. Refining Processes.
IX. Operations of Refiner Systems.
X. Process Variables and Optimization.
XI. Pulp Quality.
XII. Heat Recovery.

Part Three: Pulp Processing.
XIII. Screening, Cleaning, and Reject Refining Systems.
XIV. Screening of Mechanical Pulp - Effect of Control Parameters and Screen Operation on Pulp Quality.
XV. Centricleaning.
XVI. Reject Refining.
XVII. Thickening and Storage.
XVIII. Hydrosulfite Bleaching.
XIX. Peroxide Bleaching.
XX. Testing and Control.
XXI. Utilization of Mechanical Pulps.

Mechanical Pulping
Volume 2 of the Pulp and Paper Manufacture Series

history
refiner pulps
stone groundwood
hydrosulfite
sodium
zinc

jack pine
jelocote pine

larch
latency
light weight coated paper
lignin color
linting
loblolly pine
lodgepole pine
long fiber, sulfonation

maple
measurements on line
mechanical pulp properties
motor load control

nature of paper
newsprint

on line measurement
opacity
opco process
operation of refining systems
chip quality
chip washing
control
refining
safety
optimization of refining systems

pine
jack pine
jelocote
loblolly
ponderosa
south african
south American
pinus radiata
plybond strength
ponderosa pine
poplar
PQM control
presses, screw
pressing chips
process control
groundwood

tape

refiner pulp
pulp and paper properties, relationship between
pulp quality
bleached
TMP
CTMP
CMP
hardwoods
softwoods
CRMP
CTMP
hardwoods
softwoods
GW
hardwoods
softwoods
GW
PGW
RMP
RMP, TMP, CTMP
LYS vs VHYS
long fiber sulfonation
opco
refined
RMP
SCMP
test
TMP
CTMP, unbleached
CTMP, bleached
CTMP, CMP
RMP
pulpstones
burrs,
effect of sharpening cycle
epoxy repairs
handling and storage
initial pattern
manufacture
markings
mounting
pattern selection
reconditioning
repairs
sharpening
techniques
theory
temperature variations
trueing a new stone
pulping storage
pump, medium consistency pulp
raw material testing
raw materials
reboiler
red maple
red pine
comparison with GW
effect of pressing
sawdust
softwoods
refiner operation start up
refiner plates
alloy
changing program
design
terminology
refiner system

refining consistency
refining equipment
refining process
BCMP
chemical treatment, long fiber
chemimechanical
hardwood
softwood
chemi-refiner mechanical pulp
chemithermomechanical pulp
opco
refiner mechanical
very high yield sulfite
refining systems, optimization
refining theory
refining variables
reject
refining systems
sulfonation
rot, effect of
rotary valve
runnability of paper
safety
hydrosulfite
peroxide
refiner systems
sanitary products
sawdust utilization in RMP
SCMP process
hardwood utilization
Scandinavian spruce
screening chips
screening, pulp
effect on particle size distribution
refined rejects, quality
refiner mechanical pulping
flowsheet
operating conditions, survey
refiner mechanical pulps
higher consistency
particle size affecting rejection
perforation size
primary screening
reject rate
screen
performance
plates
screening and cleaning systems
screening
consistency
mechanism
secondary screening
shive
distribution
removal
testing
undesirable constituents in pulp
screening operation and maintenance
coarse screening
control
efficiency calculations
fine screening
ground discharge screens
ground discharge screens
pressure screens
screen plates, types
screw presses
shive
characterization
comparison of GW and TMP shive
determination
distribution
removal
sitka spruce
slash pine
soft maple
south african pine
south American pine
southern pine
spruce
black
Scandinavian
start up procedure, refiners
steam
generation
recovery
storage, pulp
sulfonation of rejects
supercalendered magazine printing paper
