**Coating, Converting & Specialty Processes**  
*Volume 8 of the Pulp & Paper Manufacture Series*  
Edited by M. J. Kocurek and M. Kouris

1990. 386 pp., 7" x 10" hard cover  
Item Number: 0202MS08  
ISBN: 0919893910

---

**Table of Contents**

**Preface**

**Part One - Pigment Coating**

**I. Pigment Coating**

A. History  
B. Growth in volume  
C. Filling a need  
D. Grades of coated paper  
E. The purpose of coating  
F. Halftone printing  
G. Some industry terms  
H. Functional types of coated paper  
I. Materials and operations  
J. Facilities  
K. Research and development  
L. Paper to be pigment coated  
M. Testing raw stock  
N. Testing of pigment-coated  
O. Sizing  
P. Pigments for paper coating  
Q. Dry-state pigment properties  
R. Adhesives (binders)  
S. Starch  
T. Protein binders  
U. Synthetic binders  
V. Paper coating additives  
W. Coating color preparation  
X. Coating color formulation

**II. The Coating Machine**

A. Historic and specialty coaters  
B. Air knife coaters  
C. Squeeze and transfer roll coaters  
D. Flexible blade coaters  
E. Miscellaneous systems

**III. Drying**

A. Introduction  
B. Drying systems  
C. Present-day drying systems  
D. Summary

**IV. Printing and Reprography - Paper Requirements**

A. Background and common areas  
B. Printing methods  
C. Reprographic methods  
D. Summary  
References

**Part Two - Finishing and Converting**

**V. Winding**

A. Winding definition  
B. Winding theory  
C. Equipment definition  
D. Winding processes  
E. Winder structure-control types  
F. Structural control function  
G. Web control function  
H. Slitting function  
I. Unwinding function and unwind types  
J. Productivity and manpower  
K. Summary of winding  
References

**VI. Overview of Calendering and Supercalendering**

A. Introduction  
B. Calenders  
C. Supercalenders  
References

**VII. Overview of Sheeting and Trimming**

A. Sheeting  
B. Trimming

**VIII. Overview of Sorting, Inspecting and Packaging**

A. Sorting and inspecting  
B. Packaging

**Part Three - Specialty Processes**

**X. Polymers**

A. Polyethylene  
B. Polypropylene  
C. Acid copolymers and ionomers
D. Polyethylene terephthalate
E. Ethylene vinyl alcohol copolymers
F. Linear low-density polyethylene
G. Special coextrusion adhesives

XI. Extrusion Coating and Laminating
A. Primary unwind
B. Gravure (primer) coater
C. Web dryers
D. Extruder
E. Coextrusion
F. Extruder controls
G. Coater-laminator
H. Surface preparation
I. Auxiliary turret unwind
J. Tandem extrusion coating-laminating
K. Gauging/scanning measuring systems
L. Winders
M. electrical drives and controls

References

XII. Hot Wax-Based Treatments
A. Introduction
B. History and development
C. Uses and markets
D. Application equipment
E. Ingredients and formulation
F. Physical properties of treatments
G. Evaluative performance tests
H. Status and future

Bibliography

XIII. Plastic Laminates
A. Introduction
B. Plastic laminates are composites
C. Manufacture of plastic laminates
D. Decorative laminates
E. Industrial laminates

References

XIV. Corrugated Shipping Containers
A. Introduction
B. Manufacture of corrugated board
C. Box fabrication
D. Rule 41 and the story of the fiber box
E. The effects of construction on compression strength
F. Failure strength
G. Stacking strength
H. Humidity
I. Palletization
J. Good warehousing practices
K. Rough handling - dynamics testing

Acknowledgements
