# "Kraft Pulping"

Edited by A. Mimms, M. J. Kocurek, J. A. Pyatte, and  
E. E. Wright

- Analysis of Kraft Liquors
  - White and green liquors
    - Calculations
  - The cooking liquor
    - Composition of typical white liquors
    - Liquor-to wood ratio
    - Alkali charge
  - The cooking cycle
    - Presteaming
    - Chip impregnation
    - Cooking
    - Blowing
  - Variables affecting the cooking
    - Time and temperature
    - Calculation of the H-factor
    - Alkali charge
    - Liquor-to-wood ratio
    - Sulfidity
  - Control parameters
  - Evaluation of pulp
    - Kappa number
    - Viscosity
    - Drainability
    - Beater evaluation
- 5 Kraft Pulping: Equipment
  - Batch Digesters
    - Construction
      - Shape and dimensions
      - Construction material
      - Heating systems
    - Chip and liquor filling
    - Heating and cooking
    - Digester relief
    - Blowing
    - Cold blowing
  - Continuous Digesters
    - Introduction
      - Construction
      - Chips and liquor charging
      - The impregnation and cooking zones
      - The washing zone
      - Blowing
      - Modifications to the Kamyr digester
      - Other continuous digesters
  - Comparison of Batch and Continuous Pulping
    - Factors favoring batch digesters
    - Factors favoring continuous digesters
    - High-density thickening
- 7 The Kraft Recovery Process
  - Overview
    - Functions and steps
  - Black Liquor Processing
    - Composition of a typical black liquor
    - Black liquor evaporation
- 6 Pulp Processing
  - Different Pulp Grades
    - Introduction
    - High-yield processes
    - Medium-yield processes
    - Low-yield processes
  - Defibering and Deknotting
    - Objective of defibering
    - Prebreakers and refiners
    - Objective of deknottng
    - Knotter designs
  - Brown Stock Washing
    - Objective of brown stock washing
    - Basic pulp washing mechanisms and operations
    - Terminology used in washing
      - Soda loss
      - Dilution factor
      - Displacement Ratio
      - Norden Efficiency Factor
    - Washing equipment
      - Rotary vacuum washers
      - Rotary pressure washers
      - Diffusion washers
      - Horizontal belt washers
      - Wash presses
    - Washing in continuous digesters
  - Screening
    - Objective of pulp screening
    - Operating principles of a pulp screen
    - Different types of screens
    - Control parameters in pulp screening
      - Screen plate design
      - Reject rate
      - Feed consistency
      - Internal dilution
      - Evaluation of screen performance
      - Pulp screening systems
  - Centrifugal Cleaning
    - Objective of centrifugal cleaning
    - Operation principles
    - Centrifugal cleaner systems
    - Operating variables
    - Operating problems
  - Thickening
    - Objective of thickening
    - Low-density thickening
      - Objective
      - Multiple-effect evaporators
  - The Recovery Furnace (or Boiler)
    - Functions
    - Description of the Recovery Boiler
    - Liquor combustion
    - Air flows

# "Kraft Pulping"

Edited by A. Mimms, M. J. Kocurek, J. A. Pyatte, and  
E. E. Wright

Steam generation

Smelt dissolving

Safety

Causticizing (Also called Reausticizing)

Chemistry

Green liquor clarification

Slaking and causticizing

White liquor clarification

Pressure filters

Mud washing and thickening

Lime kiln

Appendix

Fundamental concepts

Atoms

Molecules

Chemical bonding

Ions

Nomenclature

The molar concept

Molar weights

Example of calculations using molar  
weights

Solutions

pH
