Preface xv
Chapter Editors and Author/Contributor Contact Information xvii

Chapter 1—Film Extrusion Introduction *Chapter Editor: BRUCE FOSTER, PolyKnows LLC*

Section 1.1—Film Extrusion Introduction	3
BRUCE FOSTER, <i>PolyKnows LLC</i>	
Introduction	3
History	3
Since 2005	3
The Future	3
References and Additional Resources	4

Chapter 2—PRIMARY EQUIPMENT *Chapter Editor: MARTINE MICHON, Atlantic Coated Papers Ltd.*

Section 2.1—The Film Extruder	7
DONN C. LOUNSBURY, <i>D.C.L. Solutions, Inc.</i> and BILL HELLMUTH, <i>Battenfeld Gloucester Engineering</i>	
Introduction	7
The Extruder	7
The Barrel and Feed Section	7
Barrel Heating and Cooling Systems	7
Closed-Loop Liquid Cooling	9
Gearcase and Thrust Bearing Assembly	11
Screws	13
Extruder Drives	16
The DC Static Drive	16
AC Variable-Frequency Drive	17
Description	17
Heat Control Panels	18
Extruder Maintenance	18
Preventive Measures	20
Unusual Noise Indicators	20

Drive Motor Maintenance	21
Stocking Spares and Limiting Downtime	21
Screw Removal: Why, When, and How	22
The Grooved-Feed Extruder	23
History	23
Concept and Description	24
The Process	24
Screw Characteristics	25
References and Additional Resources	27

Section 2.2—Screw Design 29

ANDREW W. CHRISTIE, *SAM North America, LLC*

Introduction	29
Feedscrew Terminology	29
Extruder Functions and Plasticating Screw Design	30
Feeding/Solids Conveying	30
Grooved Feed-Throat Extruders	32
Plug Flow Compared to Melt Flow	33
Melting	33
Barrier Screw Designs	34
Energy Required for Extrusion	34
Melt Conveying	35
Mixing in an Extruder	35
Mixers	36
Plasticating Screw Design Summary	38
Materials of Construction	38
Extrusion Process Analysis and Operation	39
Objective (Online Measured) Variables	39
Subjective (Offline Measured) Variables	39
Polymer Variables	40
Operating the Extruder	40
Feed Zone	41
Screw Running Tips	42
Summary	42
References and Additional Resources	42

Section 2.3—Die Design 45

BILL BODE, *Battenfeld Gloucester Engineering*

Introduction and Function of Die	45
Single-Layer Spiral Mandrel Die Components	45
Spiral Mandrel and Body	45
Die Lip Sets	45
Die Gaps	48
Mechanical Considerations	48
Stiffness of Components/Assembly/Disassembly	48
Additional Considerations	48
Materials of Construction and Surface Coatings	49
Materials	49
Plating/Surface Coatings	49
Corrosion	49
Cleaning	49
Coextrusion Dies	50
Rheological (Flow) Considerations	50

Mechanical Considerations 52
 Other Types of Film Dies 52
 Spider Dies 52
 Wraparound Coathanger Dies 52
 Upper Die Geometry 53
 Controls 53

Section 2.4—Stacked-Die Technology for Tubular Film Coextrusion 55
 JOHN PERDIKOULIAS, *Compuplast International Inc.*

Introduction 55
 Conventional Coextrusion Dies 55
 Stacked Dies 57
 References and Additional Resources 61

Section 2.5—Winding and Web Handling 63
 R. DUANE SMITH, *Davis-Standard LLC*

Introduction 63
 Definition of a Quality Roll 63
 How to Achieve Roll Hardness 65
 Winder Components 70
 The Spreading Operation 72
 Winder Drives and Tension Control Systems 74
 Proper Shaft Selection 76
 Automatic Roll Changing Systems 77
 Conclusions 78
 References and Additional Resources 78

CHAPTER 3—ANCILLARY EQUIPMENT

Chapter Editor: RORY WOLF, ITW Pillar Technologies

Section 3.1- Gear Pumps, Filtration, Static Mixers—Function, Design, Parameters, Examples 81
 KEVIN TUTTLE, *Nordson Polymer Processing Systems*

Gear Pumps 81
 Filtration 84
 Static Mixers 92
 Gear Pump Addendum 95
 References and Additional Resources 95

Section 3.2—Feedblock Technology 97
 CHRISTINE RONAGHEN, *Cloeren Incorporated*

Introduction 97
 Primary Functions 97
 Coextrusion Behavior: A Brief Introduction to Viscosity 100
 Beyond Conventional Coextrusion 102
 Coextrusion Performance and Corrective Actions 102
 Specifying a Feedblock 104
 References and Additional Resources 104

Section 3.3—Film Stabilization, Forming and Collapsing Systems 105
 JAMES STOBIE and HARINDER TAMBER, *Macro Engineering and Technology Inc.*

Introduction 105
 Film Tube Collapse 108
 Bubble Collapsing Improvements 111

Tube Containment in High Cooling Applications	113
Summary	113
References and Additional Resources	113
Section 3.4—Material Handling Systems	115
CLIFFORD J. WEINPEL and WALTER FOLKL, <i>Foremost Machine Builders</i>	
Introduction	115
Bulk Unloading and Storage	115
In-Plant Distribution Systems	119
Piping Systems	121
Controls	122
Gravimetric Metering and Blending	122
Accuracy and Resolution	131
Summary	132
Addendum A	132
Addendum B	133
Addendum C	134
Addendum D	137
Section 3.5—Instrumentation and Process Control	139
TED SCHNACKERTZ, <i>NDC Technologies</i>	
Introduction	139
Process Controls	142
References and Additional Resources	143
Summary	143
Section 3.6—Blown-Film Cooling Systems	145
HARINDER TAMBER, <i>Macro Engineering and Technology Inc.</i>	
Introduction	145
Single-Orifice Air Rings	145
Dual-Orifice Air Rings	147
Modified Dual-Orifice Air Rings	148
Automatic Air Rings for Gauge Control	148
Internal Bubble Cooling (IBC)	149
Multiple Air Rings	151
High Cooling Rates	151
Cooling Rate Equations	152
Thermal Analysis of Blown Film Quenching	153
Thermal Load	153
Heat Removal	155
General Considerations for Blown-Film Systems	155
Summary	155
References and Additional Resources	155
Section 3.7—Surface Treatment	157
RORY WOLF, <i>ITW Pillar Technologies</i>	
Introduction: The Need for Surface Treatment	157
Flame Treatment	157
Plasma Treatment	158
Atmospheric Plasma Treatment (APT) Process	159
ASTM Test Methods	161

Cotton Swab Method	162
Drawdown Test Method	162
Warnings and Cautions	163
Corona Treating	163
Types of Corona—Treatment Systems	164
Bare-Roll System	165
Universal—Roll System	166
Power Supply for Corona Treating	166
Corona—Treating Applications	167
Sizing: Material/Process Parameters	168
Conclusions	170
References and Additional Resources	170
Section 3.8—Atmospheric-Pressure Plasmas	173
<i>RORY WOLF, ITW Pillar Technologies</i>	
Introduction	173
The Ionization Process	176
Surface Effects	176
Influence on Adhesion	178
Surface Modification by Cleaning and Etching	178
Surface Temperature Elevation	179
Surface Sputtering	179
Surface Etching	179
Surface Modification by Functionalization	182
Characterizations of Surface Modification Effects	183
CHAPTER 4—MATERIALS	
<i>Chapter Editors: KELLY FREY, Chevron Phillips Chemical Company and DORENE SMITH, Westlake Chemical Corporation</i>	
Section 4.1—Low-Density Polyethylene	187
<i>JOEL PERRITT, Westlake Chemical Corporation</i>	
Introduction	187
Reactor Technology	187
Polymer Characterization—Properties and Terminology	188
Molecular Weight Distribution	191
Common Polyethylene Additives	193
Film Properties of Polyethylenes	195
General Processing Guidelines for LPDE	196
General Uses of LDPE	197
Section 4.2—Linear Low-Density Polyethylene (LLDPE)	199
<i>NORMAN AUBEE, NOVA Chemicals</i>	
Introduction	199
Applications	199
Polymer Characterization	200
Super Hexene LLDPE	202
Typical Film Properties	203
General Processing Guidelines	204
Blends	204

Section 4.3—Metallocene Polyethylene	207
NILESH SAVARGAONKAR, <i>ExxonMobil Chemical Company</i>	
Introduction	207
Metallocene LLDPE	207
Introduction of Long-chain Branching (LCB)	208
Rheological Behavior and Processing of mLLDPE	208
Physical Properties of mLLDPE	209
Sealing Behavior of mVLDPE and Plastomers	210
Physical Properties of Blends of Plastomers	212
Applications for Metallocene LLDPE	212
Newer Products	212
Summary	212
References and Additional Resources	214
Section 4.4—Polyolefin Plastomers	215
JACQUELYN DEGROOT and JEFFREY ARIONUS, <i>The Dow Chemical Company</i>	
Introduction	215
Properties	215
Hot Seal and Hot Tack of Ethylene-Based Polymers	217
Propylene-Based Plastomers	218
Applications	218
Processing Polyolefin Plastomers	218
Acknowledgements	220
References and Additional Resources	221
Section 4.5—High Molecular Weight—High Density Polyethylene	223
MARK CANRIGHT and AMY M. LAIRD, <i>ExxonMobil Chemical Company</i>	
Introduction	223
Polymer Characterization	223
Typical Polymer Properties	225
Biaxial Orientation	225
General Processing Guidelines	226
Blown-Film Die	227
Film Cooling	227
Collapsing Parameters	227
Treating	227
Applications and End Uses	227
Summary	228
References and Additional Resources	228
Section 4.6—Polybutylene-1 for Peelable Seals	229
STEFANO PASQUALI, <i>LyondellBasell Industries</i>	
Introduction	229
Polybutene-1 Key Features	229
Easy-Peel Application	229
How to Design a Peelable Film	229
Advantages of Using PB-1 in Easy-Peel Applications	232
Application Examples	233
Quality Testing	234
Summary	234
References and Additional Resources	234

Section 4.7—Polypropylene	235
THOMAS J. SCHWAB and MARIO PERRON, <i>LyondellBasell Industries</i>	
Introduction	235
Types of Polypropylene (PP)	235
Polypropylene Film Manufacture	236
Additives	237
References and Additional Resources	237
Section 4.8—Nylons	239
SERGI SALVÀ SÀEZ and JA'NAYSHA HAMILTON, <i>UBE America Inc.</i>	
Introduction	239
Nomenclature	239
Nylon Synthesis and Chemistry	239
Nylon Extrusion	242
Processing Techniques Used for Nylon Resins	245
Nylon Film Properties	247
Applications	249
Summary	251
References and Additional Resources	252
Section 4.9—Ethylene Vinyl Alcohol Copolymers	253
MARK PUCCI, <i>Soarus, L.L.C.</i>	
Introduction	253
Synthesis of EVOH Copolymers	253
Oxygen Barrier Properties of EVOH	253
Other Properties of EVOH	254
Multilayer Structures with EVOH	255
Solvent Barrier Properties of EVOH	256
Processing of EVOH	256
Summary	257
Section 4.10—Polyesters	259
JOSE TORRADAS, <i>SALTOR LLC</i>	
Introduction	259
History	259
Chemistry	259
Pet Versatility	260
Physical State	260
Rheology	261
Properties of Polyester	261
General Processing	263
Specific Film Processes	265
Secondary Operations	265
Applications	266
Summary	266
References and Additional Resources	266
Section 4.11—Tie Polymers	269
BARRY A. MORRIS and I-HWA LEE, <i>The Dow Chemical Company</i>	
Introduction	269
Tie-Resin Selection	269
Bonding During Coextrusion	270
Bonding in End Use	271
Processing Guidelines	271

Summary	272
References and Additional Resources	272
Section 4.12—Ethylene Vinyl Acetate	273
MATTHEW SONNYCALB, <i>LyondellBasell Industries</i>	
Introduction	273
Polymer Characterization	273
Applications	275
General Processing Recommendations	276
References and Additional Resources	276
Section 4.13—Acrylate Copolymers	277
MICHAEL G. BAKER, <i>Westlake Chemical Corporation</i>	
Introduction	277
Chemistry and Manufacturing	277
Property Review	277
Processing Guidelines	278
Applications	280
Handling and Safety	280
Regulatory	281
Section 4.14—Acid Copolymers and Ionomers	283
BARRY A. MORRIS and SCOTT B. MARKS, <i>The Dow Chemical Company</i>	
Introduction	283
Properties	283
Applications	287
General Processing Considerations	287
References and Additional Resources	288
Section 4.15—Polyvinylidene Chloride (PVDC)	289
KUN SUP HYUN, <i>Formerly of the Dow Chemical Company</i>	
Introduction	289
Characteristics	289
Processing	289
References and Additional Resources	290
Section 4.16—Polymer Processing Additives (PPA)	291
CLAUDE LAVALLÉE, <i>3M Company</i>	
Introduction	291
Interactions	299
Conclusions	301
References and Additional Resources	301
Section 4.17—Additives for Film Products	303
TAD FINNEGAN and R. E. KING, III, <i>BASF Corporation</i>	
Introduction	303
Acid Scavengers	303
Adhesion Promoters	303
Antiblock Agents	304
Antifogging Agents	305
Anti-Gas Fading (For Color-Critical Applications)	305
Antioxidants (For Long-Term Stability)	306
Antistatic Agents	307
Biocides	308
Cling Agents	308
Colorants	308

Degradation Accelerators	310
Fillers	310
Flame Retardants	310
Melt-Processing Stabilizers	311
Metal Deactivators	312
Polymer Processing Aids	312
Slip Additives	313
Ultraviolet Stabilizers	313
UV Absorbers	313
Additive Delivery	314
Synergistic and Antagonistic Mixtures of Additives	315
Additive Antagonism	316
Ancillary Properties	316
Performance Testing	317
Coextrusion and its affect on Additive Use	317
Summary	317
References and Additional Resources	318
Section 4.18—Slip Agents	319
ADAM J. MALTBY and RICHARD E. MARQUIS, <i>Croda Universal Inc.</i>	
Introduction	319
Raw Material Source	319
Manufacture	319
How Amides Function in Polymers	319
Measurement of Friction	320
How Amides are Added to Polymer	320
Summary	323
References and Additional Resources	324
CHAPTER 5—PROCESSING	
<i>Chapter Editor: NORMAN AUBEE, NOVA Chemicals</i>	
Section 5.1—Blown-Film Processing	327
HARINDER TAMBER and MIREK PLANETA, <i>Macro Engineering and Technology Inc.</i>	
Introduction	327
Basics of Blown-Film Process	328
Blown-Film Process: Correlation of Resin, Equipment and Process Conditions	328
Comparison of Air vs. Water Cooled Blown-Film Processes and Properties	337
Start-up and Shut Down of Blown-Film Line	337
References and Additional Resources	339
Section 5.2—Cast Film	341
CHRISTINE RONAGHAN, <i>Cloeren Incorporated</i>	
Introduction	341
Cast Unit Configuration	341
Cast Embossed Film	345
Additional Features	345
Section 5.3—Sheet Extrusion Process	347
SAM IULIANO, <i>Nordson Extrusion Dies Industries, LLC</i>	
Introduction	347
Sheet Extrusion Line Equipment	347
Summary	356
References and Additional Materials	357

Section 5.4—Polymer Rheology	359
OLIVIER CATHERINE, <i>Cloeren Incorporated</i>	
Introduction	359
Polymer Melt Viscosity	359
Shear Viscosity Models	364
Temperature-Dependent Models	365
Some Implications of Shear Rheology for Film Extrusion	366
Viscoelastic Behavior of Polymer Melts	370
Rheology and Coextrusion	372
Measurement Techniques	374
References and Additional Materials	381
Section 5.5—Coating and Laminating Technology	383
GIANCARLO CAIMMI, <i>Nordmeccanica Group</i>	
Introduction	383
Preliminary Aspects and Definitions	383
Section 5.6—Metallizing	391
VERONICA ATAYA, <i>Celplast Metallized Products Limited</i>	
Introduction	391
Metallizing Process	391
Applications	393
Barrier Properties of Metallized Films	393
Processing of Metallized Films	394
Metallized Film Defects	394
Summary	394
References and Additional Materials	395
Section 5.7—Troubleshooting the Extruder	397
ANDREW W. CHRISTIE, <i>SAM North America, LLC</i>	
Introduction	397
Coextrusion Film Systems	397
Troubleshooting Method	398
The Problem Statement	398
The Hypothesis	398
Test the Hypothesis	399
Evaluating the Results	399
Common Problems, Hypothesis, and Tests	399
Section 5.8—Troubleshooting the Blown-Film Process	403
HARINDER TAMBER and MIREK PLANETA, <i>Macro Engineering and Technology Inc.</i>	
Introduction	403
Basics of Blown-Film Process	403
Troubleshooting: Blown-Film Equipment and Blown-Film Process	405
Film and Roll Defects	419
Summary	421
References and Additional Resources	421
Section 5.9—Troubleshooting the Cast Film Process	423
CHRISTINE RONAGHAN, <i>Cloeren Incorporated</i>	
Introduction	423
Section 5.10—Gel Troubleshooting	427
MARK A. SPALDING, EDDY GARCIA-MEITIN, and STEPHEN L. KODJIE, <i>The Dow Chemical Company</i>	
Introduction	427
Protocols for Gel Analysis	427

Examples of Gel Types	429
Locating Stagnate Regions on Screws	435
Poorly Designed Extrusion Processes	436
Nitrogen Inerting on the Hopper	442
The Incumbent Resin Effect	442
Discussion	443
Summary	443
Acknowledgements	443
References and Additional Resources	443

Section 5.11—Extrudable Polymers: Purging and Resin Transactions. 445

SCOTT B. MARKS and BARRY A. MORRIS, *The Dow Chemical Company*

Introduction	445
Theory of Purging/Polymer Transitions	446
Guidelines and Procedures for Purging/Resin Transitions	450
References and Additional Resources	452

SECTION 5.12—Safety in Film Extrusion 453

NICOLE E. DOWLING and LAURA K. MERGENHAGEN, *The Dow Chemical Company*

Introduction	453
Preparation	453
Potential Hazards	454
Extrusion	454
Post-Extrusion	455
Maintenance	456
Summary	456
References and Additional Resources	456

CHAPTER 6—STRUCTURE DEVELOPMENT, NOMENCLATURE AND TESTING

Chapter Editor: WARREN DURLING, Clorox Services Company

Section 6.1—Film Properties and Performance. 459

DEAN FERRACANE, SARAH KUHL and KENYATTAH MATHIS, *Clorox Services Company*

Haze	459
Light Transmission	459
Gauge (thickness)	459
Tear Strength	460
Tensile Strength	460
Puncture Resistance	461
Stiffness/Elasticity	461
Density	461
Coefficient of Friction (COF)	462
Surface Roughness	462
Surface Energy	462
Oxygen Transmission Rate (OTR)	462
Water Vapor Transmission Rate (WVTR)	463

Section 6.2—Film Quality and Test Methods 465

DAVE BOSTIAN, *CharterNEX Films*

Introduction	465
Pre-Fabrication Testing	465
Film Production	465
Visual Properties	466
Physical Properties	467

Surface Properties	470
Barrier Properties	471
Summary	471
Section 6.3—Introduction to Structures	473
SCOTT B. MARKS and BARRY A. MORRIS, <i>The Dow Chemical Company</i>	
Introduction to Packaging and Industrial Structures	473
Functions of a Package	473
Key Questions and Design Criteria for Creating a Package	473
Typical Functional Components in a Packaging Structure	474
Functions of the Layers	474
Surface Layer Choices	475
Bulk Layer Choices	475
Barrier Layer Choices	475
Sealant Layer Choices	476
Adhesive Layer Choices	477
Section 6.4—Critical Requirements for Structures	479
THOMAS J. DUNN, <i>Flexpacknology LLC</i>	
Overall Composite Integrity	479
Packaging	479
Design for Use	480
Design for Manufacture	481
Non-Packaging Applications	481
References and Additional Resources	482
Section 6.5—Quality Control (QC) and Physical Testing	483
THOMAS J. DUNN, <i>Flexpacknology LLC</i>	
What to Test: Sampling Production	483
How to Test: Testing Secondary Quality Characteristics	484
Containment Integrity Characteristics	484
Protection/Preservation Characteristics	485
Transportation Integrity Characteristics	487
Communication Integrity Characteristics	488
Extrusion-Coated and Laminated Material Specifications	489
References and Additional Resources	489
Section 6.6—Structure Writing and Nomenclature	491
SCOTT B. MARKS, <i>The Dow Chemical Company</i>	
Writing Guide for Packaging Films and Other Multilayer Structures	491
Guide to Multilayer Structure Writing: Packaging and Industrial Applications	491
Materials (Generic Representations)	492
Structure Examples	494
Trademark References	497
<i>Glossary</i>	499
<i>Conversion Factors for SI (metric Units)</i>	515
<i>Index</i>	517
<i>Chapter Editors and Reviewers Biographies</i>	523
