Section:	TAPPI PRESS
Title:	Binder Migration in Paper and Paperboard Coatings

TAPPI PRESS

Binder Migration in Paper and Paperboard Coatings
Edited by Michael J. Whalen-Shaw

1993. 142 pp., 8-1/2" x 11" soft cover
Item Number: 0101R203

ISBN: 0898522706

This book offers a fundamental understanding of binder migration, and covers how binder migration happens, what factors cause or influence it, strategies to use in controlling it, and how binder migration affects printing and gluing. Contents include: physics of binder migration; fundamentals and strategies; effect of drying; effect of printability and print quality; computer-aided modeling; paperboard; and detection and measurement.

Table of Contents:

Chapter 1 Computer-aided Modeling of Binder Migration
Introduction
Drying and binder migration mechanisms
Capillary pressure
Gas pressure differences
Chemical potential differences
Disjoining pressure
Network theory and coatings
Theory of drying and binder migration
Base case defined
Governing equation set
Viscous flow equations
Binary diffusion equations
Computational results
Results
Discussion
Uniform coating thickness
Base case solved
Nonuniform coating thickness
Fast initial drying, moderate diffusion coefficient
Fast initial drying, continuously decreasing diffusion coefficient
Slow initial drying, moderate diffusion coefficient
Slow initial drying, fast diffusion coefficient
Slow initial drying, slow diffusion coefficient
Concluding remarks

Acknowledgement
Bibliography
Chapter 2 Fundamentals and Strategies
Introduction
Description of base papers and coatings colors
A qualitative description of binder migration during paper coating
Binder migration as a filtration process
Driving forces for binder migration
Water transport in paper
Capillary and pressure penetrations
Migration of liquids into base paper from coating colors
Drying Considerations
Relationship between paper coating properties and process to binder migration
Effect of dehydration and solids
Double coating
Effect of pigment
Effects of water retention, hydrocolloids, thickeners, and natural binders
Influence of colloidal properties on binder migration
General considerations
Specific colloidal interactions
Speculative strategies to control of binder migration
Concluding remarks

Bibliography

Chapter 3 Effect of Drying

Introduction

Historical perspective

The wet coated web

Paper substrate

Coating

Liquid

Binder and liquid movement relationships after metering

Soluble binders

Particulate binders

Liquid movement after metering

Coating dewatering

Coating drying

Binder migration during drying

Coating solids for binder immobilization

The drying process

Zoning

Air flotation dryers

Conventional steam cylinder dryers

Infrared dryers

The complete drying system

Closure

Bibliography

Chapter 4 Effect of Printability and Print

Quality

Introduction

Mottled offset print

The course of events in the offset printing press

Back trap mottle

Ink piling and micropick

Fountain water mottle

Characterization of offset mottle

Stain tests

Simulating tests

Subjective evaluation of stains and prints

Image analysis of stains and prints

The effect of binder migration and coating conditions on offset print mottle

Effect of the process of consolidation in general

Effect of the coat weight

Effect of the drying conditions

Effect of Coating structure

Surface strength of coated papers - general aspects

The basic types of failure

Basic concepts regarding failure in laminate structures

The importance of the interface

Mechanical properties of the coating films

The effect of the pigment on mechanical properties and surface strength

The importance of adhesion and wet surface strength

Effect on surface strength of binder distribution and binder migration

Bibliography

Chapter 5 Paperboard

Product performance

Process effects

Drying

Formulation

Double coating

Concluding remarks

Bibliography

Chapter 6 Detection and Measurement

Introduction

Indicators of binders distribution

Cross-section method

Abrasion methods

Scraping method

Gloss

Surface strength measurements

Tests for coating receptivity

K&N test

Croda test

IGT printability tester

Water retention (liquid migration) measurement

Conductivity measurement

Mechanical methods

Roller and inclined plane method

Method of Wink and van den Akker

Ultrasonic techniques

Optical methods

Other methods

Binder analysis

Spot tests

Protein

Starch, PVAc, PVA

Styrene-butadiene

Poly(vinylidene chloride)

Wet chemical tests

Protein

The Lowry method

The Coomassie Brilliant Blue G-250 dye binding method

The bicinchoninic acid method

Starch

Poly(vinyl acetate)

Poly(vinyl alcohol)

Carboxymethyl cellulose

Uranyl precipitation method (gravimetric)

Colorimetric uranyl method

Copper precipitation method

2,7-Dihydroxynaphthalene method

Chromotropic acid method

Styrene-butadiene

Instrumental analysis

Attenuated total reflectance (ATR) infrared spectroscopy

Fourier transform infrared (FTIR) spectroscopy
Pyrolysis methods
Pyrolysis-GC
Pyrolysis IR
Interference microscopy
Electron microscopy
Electron spectroscopy for chemical analysis
Ultraviolet surface profile
Summary
Potential techniques
Fourier transform infrared spectroscopy with photoacoustic detection
Internal reflection microspectroscopy
Infrared microscopy
Fourier transform (FT) Raman spectroscopy
Molecular optics laser examiner (MOLE)
Raman microprobe
Chemiluminescence
Secondary ion mass spectrometry (SIMS)
Laser microprobe mass spectrometry (LAMMS)
Other techniques
Conclusions
Acknowledgements
Bibliography

Abrasion methods
Absorption
Adhesion
Air flotation dryers
Air flotation drying
Air knife coating
Aircap dryers
Alginate
Attenuated total reflectance

Back trap mottle
Base case
Base paper porosity
Base papers
Base sheet
Bicinchoninic acid method
Binary diffusion equations
Binder affinity
Binder concentration
Binder coverage
Binder deposition
Binder deposition map
Binder distribution
Binder immobilization
Binder migration
Binder migration base case
Binder migration control
Binder penetration
Binder redistribution
Binder type
Boundary conditions

Cake filtration
Calcium carbonate
Capillary
Capillary number
Capillary penetration
Capillary pressure
Capillary pressure flow
Carboxymethyl cellulose
Chemical composition of the pigment
Chemical potential differences
Chemical-potential flow
Chemiluminescence
Chromotropic acid method
Clay
Clay coatings
Clay pigments
CMC
CMC-latex
Coat weight
Coat weight profile
Coat weight variation
Coated web dimensions
Coating colors
Coating dewatering
Coating colors
Coating dewatering
Coating drying
Coating immobilization
Coating structure
Coating temperature
Coating thickness
Colloidal properties
Colorimetric uranyl method
Combination of IR
Computational results
conductivity measurement
Conformability variation
Constant rate
Controlled destabilization
Convective zone
Convective zones
Coomassie Brilliant Blue G-250 dye binding method
Copper precipitation method
Critical solids concentrations
Croda
Croda-ink
Croda-stain
Croda test
Cross-section method
Cylinders

Darcy's law
Dehydration
Depth filtration
Dewatering
Different pigments
Diffusion coefficient
Diffusion rate

Directional migration
Disjoining pressure
Disjoining-pressure flow
Distribution
Double coating
Drying
Drying binder migration mechanisms
Drying conditions
Drying rate
Drying systems and strategies

Electric IR dryer
Electron microscopy
Electron spectroscopy
Elongation at rupture
Evaporation
Evaporation profile
Evaporation rate

Falling rate
Falling-rate drying period
Fast drying
Fast initial drying
FCC
Fiber surface wetting
Filter cake
Filter-cakes
First critical concentration
First critical concentration or FCC
Fountain water
Fountain water mottle
Fourier transform infrared spectroscopy
Fourier transform infrared spectroscopy with photoacoustic detection
Fourier transform (FT) Raman spectroscopy
Fracture stress

Gas pressure differences
Gas-fired and electric units
Gel point
Glass transition temperature (T_g)
Gloss
Glue bond
Glueability
Groundwood

Haines jumps
Half-tone areas
Half-tone dots
High drying
High solids
High solids content
High velocity
Higher solids coatings
Hot air
Hydrocolloids
Hydrostatic pressure

IGT printability tester

Image analysis
Immobilization
Immobilization solids
Impingement arch dryer
Indicators of binder distribution
In-plane mechanical properties
Infrared
Infrared dryers
Infrared microscopy
Ink layer thickness
Ink penetrating
Ink piling
Ink refusal
Ink trapping
Instrumental analysis
Interactive latexes
Interference microscopy
Internal bonding
Internal reflection microspectroscopy
IR
IR-dryer
IR-drying

K&N
K&N-ink
K&N-stain
K&N test
Kozeny-Carman equation

Laser microprobe mass spectrometry (LAMMS)
Latex concentration
Latex migration
Latex particles
Liquid movement
Liquid phase viscosity
Lowry method

Medium filtration

Optical methods

Pair-wise comparison

Paper substrate	Specific surface
Paperboard	Specific tensile strength
Particulate binders	Spot tests
Pick strength	Spreading force
Pigment	Stability of colloidal systems
Pigment distribution	Stain tests
Pigment particles	Starch
Pigment shape	Starch bound coating
Pigment size	Starch migration
Pigmentation	Starch penetration
Pigments	Starch-latex coatings
Poiseuille's law	Starch, PVAc, PVA
Polystyrene latexes	Steam cylinder dryers
Polyvinyl acetate	Strategies to control of binder migration
Poly (vinyl alcohol)	Styrene-butadiene
Poly (vinylidene chloride)	Styrene-butadiene latex
Pore bodies	Supercalendering
Pore size	Surface energy
Pore sizes	Surface latex
Pore structure	Surface rupture
Porometrique	Surface strength
Porometrique inks	Surface strength measurements
Porosity	Surface tension
Porosity of the coating layer	
Pressure penetration	Tensile strength at rupture
Pressure penetrations	Tests for coating receptivity
Print mottle	Thickeners
Protein	2,7-Dihydroxynaphthalene method
Protein-latex coatings	
Prufbau-apparatus	Ultrasonic techniques
Pyrolysis IR	Ultraviolet surface profile
Pyrolysis-GC	Uniformity
	Uranyl precipitation method
Railrod-tracking	
Ranking	Viscosity
Rawstock nonuniformity	Viscous flow
Retrogradation	Viscous flow equations
Reynolds number	
Roland press	Walker-Fetsko
Roller and inclined plane method	Water absorption
Rubber blanket	Water retention
	Water transport
SCC	Weak boundary layer
Scraping method	Weak interfacial forces
SDTA	Wet chemical tests
Second critical concentration	Wet coating thickness
Second critical concentration or SCC	Wet surface strength
Secondary ion mass spectrometry (SIMS)	
Simulating tests	Young-Laplace
Slow drying	Young-Laplace equation
Slow initial drying, fast diffusion coefficient	
Slow initial drying, moderate diffusion coefficient	
Slow initial drying, slow diffusion coefficient	
Solids content	
Soluble binder	
Solvated binder	
Sorptivity	
Soy protein	Zoning
