

# The Corrugated Containers Manufacturing Process

## TABLE OF CONTENTS

### Chapter One: Paper and the Papermaking Process

The history of paper .....	3
Terms .....	4
Abrasiveity/ash .....	4
Basis weight .....	4
Caliper .....	4
Compression strength .....	4
Concora .....	5
Facing .....	5
Fiber angle .....	5
Formation/appearance .....	5
Internal bond .....	5
Medium .....	6
Moisture content .....	6
Mullen burst test .....	6
Porosity .....	6
Sizing/Cobb .....	7
Slide angle .....	7
Tensile .....	7
Water absorbency .....	7
Converting wood fiber to pulp .....	8
Chemical pulping .....	8
Mechanical pulping .....	9
Semi-chemical pulping .....	9
Processing pulp .....	10
Screening .....	10
Cleaning .....	10
Thickening .....	11
Refining .....	11
An overview of the papermaking process .....	12
Forming section .....	12
Press section .....	12
Dryer section .....	13
Calendering .....	14
Reel .....	14
Rewinding .....	14
<b>Chapter Two: Steam</b>	
Introduction .....	19
What is steam? .....	19

Why use steam? .....	19
The role of heat .....	19
Terms .....	20
Blowdown .....	20
Btu .....	20
Condensate .....	20
Flash steam .....	21
Heat .....	21
Heat content .....	21
Sensible heat .....	21
Latent heat of vaporization .....	21
Superheat .....	21
Pressure .....	21
Saturated steam .....	21
Specific volume .....	21
Temperature .....	21
Vacuum .....	21
Water and water treatment .....	21
Hardness .....	22
Oxygen .....	22
Deposit control .....	23
Condensate treatment .....	24
Principles of steam .....	24
General concepts of steam and steam production .....	25
Water tube .....	25
Fire tube .....	25
The steam cycle .....	26
Steam system components .....	26
Preheater/preconditioner .....	26
Drum .....	26
Rotary joint .....	27
Installation of rotary joints .....	27
Troubleshooting rotary joint problems .....	27
Siphon .....	28
Condensate receiver .....	28
Steam trap .....	28
Trap testing and troubleshooting .....	30
Steam chests .....	30
Steam distribution system .....	31
Cascade system .....	31
Single-pressure or "live" system .....	32
Factors limiting steam supply to the corrugator .....	32
Steam showers .....	32

Radiation losses	32
Noncondensable gases (air)	32
Improperly functioning traps	33
Scale	33
Improperly functioning siphons	33
Inefficient condensate return system	33

### Chapter Three: Corrugating Adhesives

Introduction	37
The history of corrugating adhesives	37
Terms	38
Gel point (gelatinization temperature)	38
Percent solids	38
Shear sensitivity	38
Shelf-life	39
Slurry	39
Soluble	39
TVC	39
Viscosity	39
Components of a typical corrugating adhesive	40
Water	40
Starch	40
Caustic soda (sodium hydroxide)	42
Borax	43
Water-resistant resin	44
Other additives	45
Adhesive preparation and mixing equipment	45
Prior technology	45
Current technology	48
Storage and handling equipment	49
Adhesive system cleaning	50
Bonding theory	50
Common adhesive problems	51
Viscosity	51
Viscosity decrease	51
Low finished batch viscosity	52
Viscosity increase	52
High finished batch viscosity	52
Temperature	53
Batch temperature too high	53
Carrier temperatures too high	53
Temperature in storage is too high or too low	53
Gelatinization	54

High gelatinization temperature .....	54
Low gelatinization temperature .....	54
Gelatinization temperature varies .....	54
Summary .....	54

## Chapter Four: Single Face Operations

Introduction .....	59
Fluting .....	59
History of flutes .....	60
Terms .....	61
Applicator roll .....	61
A/LCR ratio .....	61
Bridge .....	61
Corrugating medium .....	61
Corrugating roll finger .....	62
Corrugating rolls .....	62
Fluff out .....	62
Flute profile .....	63
Idler roll .....	63
Inclined conveyor .....	63
Linerboard .....	63
Liner preheater .....	63
Lower corrugating roll .....	63
M/A ratio .....	63
Medium preconditioner .....	63
Metering roll .....	63
Preheater wrap arm .....	63
Pressure roll .....	63
Pressurized (fingerless) single facer .....	64
Roll crown .....	64
Roll stand .....	64
Roll stand brake .....	64
Single face web .....	64
Splicer .....	64
Spreader bar .....	64
Steam shower .....	64
Upper corrugating roll .....	64
Upper/lower integral preheaters .....	64
Vacuum (fingerless) single facer .....	64
Raw Materials/process inputs .....	64
Liner .....	64
Medium .....	65
Adhesive .....	65

Steam .....	.65
Pressure .....	.65
Principles of single facer operation .....	.65
Unwinding and tension Control .....	.65
Preheating and preconditioning .....	.66
Flute formation and bonding .....	.68
Common single face problems .....	.72
Flute fracture .....	.72
Low caliper .....	.72
Blisters/delamination .....	.73
Zipperboard .....	.74
Pressure cutting .....	.74
High/low corrugations .....	.74
Leaning flutes .....	.74
Summary .....	.74

## **Chapter Five: Double Facer and Dry End Operations**

Introduction .....	.79
Major components .....	.79
Bridge guide .....	.80
Triplestack preheaters .....	.80
Double face glue machine .....	.81
Applicator roll .....	.82
Metering roll .....	.82
Metering roll scraper blade .....	.82
Rider roll .....	.82
Liner and single face web preheaters .....	.83
Starch pan .....	.83
Glue machine drive .....	.84
Housekeeping .....	.84
Double face heating section .....	.84
Steam chests .....	.84
Hold-down system .....	.86
Traction section .....	.87
Upper corrugating belt .....	.88
Lower corrugating belt .....	.88
Head pulleys .....	.88
Tail pulley .....	.89
Rotary shear .....	.89
Slitter/Scorer .....	.89
Slitting and scoring .....	.90
Triplex slitter/scorer .....	.90
Automatic slitter/scorers .....	.91

Trim removal .....	92
Web director .....	93
Cut-off knife .....	93
Mechanical knives .....	93
Direct drive knives .....	94
Infeed and outfeed sections .....	95
Corrugator stackers .....	96
Upstacker .....	96
Downstacker .....	98
Summary .....	99
Glue machine .....	99
Double face heating section .....	99
Rotary shear .....	100
Slitter/scorer .....	100
Cut-off knife .....	100
Corrugator stackers .....	100

## Chapter Six: Combined Board

Introduction .....	103
History of Rule 41 classification .....	104
Containment strength vs. edgewise strength .....	107
Compression strength of paper .....	107
Edge crush test (ECT) .....	108
Corrugating variable effects on edge crush .....	108
Flexural stiffness of combined board .....	109
Top-to-bottom compression strength .....	110
Compression strength vs. required stacking strength, how strong is necessary? .....	111
Common box problems .....	112
Skew .....	112
Over-slotting .....	112
Crush .....	112
Improperly placed holes .....	112
Inadequate scores .....	112
Stacking patterns .....	112
Summary .....	114

## Chapter Seven: Converting

Introduction .....	119
From a sheet to a finished box .....	119
Flexo folder-gluer .....	120
Prefeeder .....	120
Feed section .....	121
Print station .....	124

Creaser/slotter section .....	132
Folder-gluer .....	135
Delivery section .....	137
Diecutting .....	138
Rotary diecutting .....	140
Platen Diecutting .....	148
