This edition includes information on classic materials and troubleshooting techniques as well as the latest materials and machine designs available anywhere in the world today.

TABLE OF CONTENTS

1. Introduction and history .................................................................................. 1
2. Extrusion coating lines ................................................................................... 3
3. What is Extrusion Coating? ............................................................................ 7
4. The Extrusion Coating/Laminating Extruder ................................................ 17
5. Screw Design Considerations for Extrusion Coating ..................................... 29
6. Feed Screw Design ....................................................................................... 35
7. Extrusion Dies for Flat Sheet, Film, and Coatings ....................................... 47
8. A Survey of Current Bead Reduction Die Technology .................................. 55
9. Corona Treatment Enhanced Adhesion for Extrusion coating ....................... 65
10. Ozonation of Polymer Melt for Improved Adhesion ................................... 75
11. Flame, Corona, Ozone – Do We Need all Pretreatments in Extrusion coating? ........................................................................................ 89
12. Chemical Primers to Enhance Adhesion and Other Properties ..................... 99
13. Coat Weight/Thickness Measurement and Control ...................................... 109
14. Flame Plasma Surface Treatment ................................................................ 121
15. Winding ..................................................................................................... 131
16. Machinery Upgrades and Rebuilds ............................................................. 153
17. Safety in Extrusion Coating Design ............................................................ 163
18. Extrusion Coating: some Basic Observations ............................................. 173
19. Polyolefin Properties in Extrusion Coating ............................................... 181
20. Chemical, Physical, and Mechanical Properties of common Polymers ....... 185
21. Polyethylene for Extrusion Coating ............................................................. 201
22. Extrusion Coating Linear Low-density Polyethylene .................................. 209
24. Ethylene Vinyl Acetate Resins for Extrusion Coating .................................. 227
25. Ethylene Methyl Acrylate Copolymers for Extrusion Coating .................... 231
26. Acid Copolymers for Extrusion coating ...................................................... 235
27. Ionomer Resins for Extrusion Coating ....................................................... 241
28. Extrudable Adhesive Resins for Coextrusion Coating ................................. 249
29. Extrusion Coating Polypropylene .............................................................. 253
