Process Synthesis or Fuel Ethanol Production

Table of Contents

Biofuels
Biofuels Generalities
Gasoline Oxygenation
Ethanol as a Gasoline Oxygenate
Gasoline Oxygenation Programs with Fuel Ethanol in Some Countries

Process Design and Role of Process Synthesis
Conceptual Process Design
Knowledge-Based Process Synthesis
Optimization-Based Process Synthesis
Final Considerations

Feedstocks for Fuel Ethanol Production
Sugars
Starchy Materials
Lignocellulosic Materials

Feedstock Conditioning and Pretreatment
Conditioning of Sucrose-Containing Materials
Pretreatment of Starchy Materials
Pretreatment of Lignocellulosic Biomass
Detoxification of Pretreated Biomass

Hydrolysis of Carbohydrate Polymers
Starch Saccharification
Hydrolysis of Cellulose

Microorganisms for Ethanol Production
Metabolic Features of Ethanol-Producing Microorganisms
Nongenetically Modified Microorganisms for Ethanol Production
Genetically Modified Microorganisms for Ethanol Production

Ethanolic Fermentation Technologies
Description of Main Fermentation Technologies for Ethanol Production
Modeling of Ethanolic Fermentation for Process Design Purposes
Analysis of Fed-Batch Ethanolic Fermentation
Dynamics of Continuous Fermentation Systems

Analysis of Ethanol Recovery and Dehydration
Concentration and Rectification of Ethanol Contained in Culture Broths
Ethanol Dehydration
Evaluation of Separation and Dehydration Schemes

Integrated Processes for Fuel Ethanol Production
Process Integration
Reaction–Reaction Integration for Bioethanol Production
Reaction–Separation Integration for Bioethanol Production
Separation–Separation Integration for Bioethanol Production

Environmental Aspects of Fuel Ethanol Production
Effluent Treatment during Fuel Ethanol Production
Environmental Performance of Fuel Ethanol Production
Technological Configurations for Fuel Ethanol Production in the Industry
Ethanol Production from Sucrose-Containing Materials
Ethanol Production from Starchy Materials
Ethanol Production from Lignocellulosic Materials
Role of Energy Integration during Process Synthesis
Food Security versus Fuel Ethanol Production
Crop Potentials for Food and Energy
Bioethanol and Fossil Oil Dependence
Bioenergy and Transgenics
Bioenergy and Food Market
Bioenergy and Food Security Project
Concluding Remarks
Perspectives and Challenges in Fuel Ethanol Production
Feedstocks
Process Engineering
Food Security Impacts
Environmental Impacts
Index
References appear at the end of each chapter.
