   Charts ....................................................................................................................... 36
5 Advanced Lean Tools for Safety ........................................ 53
   Facilitated Leadership: Changing How People Think .............. 53
   Lean Tool: A3 Problem Solving ........................................ 53
   Step 1: State the Agreed Upon Problem or Need ................. 54
   Step 2: Draw the Current State Map or State the Current ...... 54
                Condition ................................................... 54
   Step 3: Problem Solving—Use Ask “Why” Five Times ............ 54
                Technique to Get to Root Causes ......................... 54
   Step 4: The Future State—Draw a Map or Describe How ....... 57
                You Would Like It to Be ................................ 57
   Step 5: Implementation Plan ......................................... 57
   Step 6: Audit Expected Results against Actual Results ........ 57
   Lean Tool: Kaizen Blitz ............................................. 58
   Planning the Kaizen Event .......................................... 61
   Facilitating the Kaizen Blitz ...................................... 68
   Kaizen Team Presentation ........................................... 78
   Kaizen Event Follow-Up Meeting .................................. 80
   Endnote ........................................................................ 91

6 Safety Program Leadership ........................................... 93
   It Doesn’t Have to Be a Manager .................................... 93
   Team Leader ................................................................ 95
   Management Facilitator .............................................. 95
   Accident Investigation Facilitator .................................. 95
   Recorder Keeper .......................................................... 96
   Subteam Leaders .......................................................... 96

7 Incident/Accident Investigation ..................................... 105
   Getting to Root Causes and Lasting Solutions .................. 105
   Focus on Process, Not People ....................................... 106
   Getting to Root Cause and Corrective Actions .................. 108
   Quick Guide: Lean Approach to Incident and Accident ... 112
                Investigations ................................................. 112

8 Promoting Safety ...................................................... 113
   Engaging Employees to Build Safety Awareness ................. 113
   Flash Meetings ......................................................... 114
   Benchmarking (A Standard against Which Something Can Be ... 114
                Measured or Assessed) ........................................... 114
   Safety Improvement Programs ..................................... 116
   Safety Observation Program ....................................... 117
   Job Safety Analysis ................................................... 119
   Safety Kaizen Blitz Events ......................................... 119
   Quick Guide: Lean Approach to Internal Safety Promotion .... 120

9 Roadmap to World-Class Safety .................................... 121
   Pulling the Pieces Together to Build or Rebuild a Safety ... 121
                Program .......................................................... 121
   Safety Program Leadership ......................................... 122
   Lean Approach to Safety Program Leadership .................. 122
   Safety Team ............................................................ 122
   Lean Approach to a Safety Team .................................. 123
   Other Team Building Opportunities ................................ 124
   Recordkeeping .......................................................... 126
   Lean Approach to Recordkeeping .................................. 126
   Safety Program Outline Documents ............................... 127
   Safety Education ...................................................... 127
   Lean Approach to Safety Education ............................... 128
   Safety Program Activity Management ............................ 129
   Lean Approach to Safety Program Activity Management .... 129
   Safety Rule Definition ............................................... 131
   Lean Approach to Safety Rule Definition ......................... 131
Safety Communications ........................................... 132
Lean-Influenced Safety Communications ....................... 132
Quick Guide: Roadmap to World-Class Safety ................. 133

10 Safety Standard Work .......................................... 135
Foundation of Continuous Improvement ......................... 135
Quick Guide: Standard Work for Managers ...................... 138
Endnote .................................................................. 138

11 Safety Metrics ..................................................... 139
What You Measure Makes a Difference ......................... 139
Lean Approach to Safety Metrics ................................ 140
Quick Guide: Metrics ................................................ 142

12 Conclusion ......................................................... 145

Glossary ................................................................. 147
Index .................................................................. 153
About the Author .................................................... 163

Acknowledgments

Books, plant tours and the many contacts made while attending AME (Association for Manufacturing Excellence) events all contributed to building my lean knowledge base. AME is a volunteer organization that is truly unique. Only passionate volunteers can accomplish tasks on the scale of planning and executing a five-day lean conference with over 2,000 attendees. I am privileged to be an AME volunteer inasmuch as the rewards have exceeded my contributions. I have made good friends and learned a great deal about both lean and life from this group of selfless passionate volunteers. To each of you, I am grateful. The purity and longevity of this unique volunteer organization is dependent on a steady stream of practitioner volunteers. Don’t pass up the opportunity of a lifetime to get involved.

During my 40+ years in manufacturing, I have gained, from many different people, a well-rounded understanding of safety in the workplace. I would like to recognize and thank all of them because, by sharing their manufacturing and safety knowledge with me, they have contributed to this book. When they read this book, they may recognize a phrase, sentence or concept because they may have taught that lesson to me.

Thank you to Mick Ramsey and Jerry Paulson, two unique and talented CEOs, who understand the only path to lasting continuous improvement is one built on trust and employee engagement. These lessons are a foundation piece of this book. Special thanks go to Bruce Paugh and Gary Mitas. Watching your passion and knowledge grow as we together built the “lean office” was a very rewarding experience. Keep the lean fires burning. To all the Gator Guards, past and present, for helping me better understand the many facets of workplace safety. Special thanks to Cheryl Jekiel and Michael Bremer, AME associates and friends, for sharing their lean knowledge and providing the spark to begin this project. Also, Michael Sinocchi, Lara Zoble, Jay Margolis, Maggie Mogek, and others at Taylor & Francis. Without their
