The Science and Technology of Flexible Packaging: Multilayer Films from Resin and Process to End Use

Table of Contents

- Series Page
- Preface
- Part I. Why Multilayer Films?
  - 1. Introduction
    - 1.1. History of Packaging
    - 1.2. Benefits of Packaging
    - 1.3. Consumption Patterns
    - 1.4. Packaging Value Chain
    - 1.5. Needs Along the Value Chain
    - 1.6. Assembling a Package: Benefits of Multiple Layers
    - 1.7. Packaging Trends in the Context of the Value Chain
- Part II. Basic Processes
  - 2. Converting Processes
    - 2.1. Extrusion
    - 2.2. Film Converting
    - 2.3. Coating and Lamination
    - 2.4. Orientation
    - 2.5. Printing
  - 3. Packaging Equipment
    - 3.1. Brief Description of Packaging Equipment
    - 3.2. Unit Operations
- Part III. Material Basics
  - 4. Commonly Used Resins and Substrates in Flexible Packaging
    - 4.1. Resin and Substrate Function
    - 4.2. Commonly Used Resins in Flexible Packaging
    - 4.3. Commonly Used Substrates in Flexible Packaging
    - 4.4. Material Specifications
    - 4.5. Regulatory Considerations
  - 5. Rheology of Polymer Melts
    - 5.1. Basic Terms
    - 5.2. Importance of Rheology in Flexible Packaging
    - 5.3. Rheological Measurements
    - 5.4. Factors Influencing Polymer Rheology
    - 5.5. Relaxation, Creep, and Constitutive Equations
  - 6. Polymer Blending for Packaging Applications
    - 6.1. Introduction
    - 6.2. Why Blend?
    - 6.3. Blending Processes
    - 6.4. Physics of Blending
    - 6.5. Morphology Development in Blown Film
    - 6.6. Dispersion of Rigid Particles and Nanocomposites
    - 6.7. Rheology of Polymer Blends
    - 6.8. Conclusion
- Part IV. Film Properties
  - Introduction
  - 7. Heat Seal
• Part V. Effect of the Converting Process on Properties
  o Introduction
  o 13. Effect of Processing on Quality
    ▪ 13.1. Thermal Stability
    ▪ 13.2. Die Drool
    ▪ 13.3. Moisture-Related Issues
    ▪ 13.4. Flow Maldistribution and Instability Issues
    ▪ 13.5. Curl
  o 14. Effect of Process on Properties
    ▪ 14.1. Stress–Strain History in Blown Film
    ▪ 14.2. Air- Versus Water-Quench Blown Film
    ▪ 14.3. Development of Blend Morphology in Blown Film
  o 15. Effect of Processing on Interlayer Adhesion
    ▪ 15.1. Adhesion to Substrates in Extrusion Coating
    ▪ 15.2. Interlayer Adhesion in Coextrusion
• Part VI. End Use Considerations
o 16. End-Use Factors Influencing the Design of Flexible Packaging
   ▪ 16.1. Environmental Effects on Package Performance
   ▪ 16.2. Packaging–Product Interactions
   ▪ 16.3. Aging
   ▪ 16.4. General Considerations
   ▪ 16.5. Cost

• Part VII. Structure Design and Modeling
    ▪ 17.1. Identification of Packaging Structures
    ▪ 17.2. Modeling

• Appendix A. Writing Guide for Packaging Films and Other Multilayer Structures
• Appendix B. Examples of Flexible Packaging Film Structures
• Index
