

Papermaking Science and Technology

a book series
covering the latest
technology and
future trends

Book 6 (Part 1)

Chemical Pulping Part 1, Fibre Chemistry and Technology

Second Edition

Totally updated version

Book editor

Fardim, Pedro, D.Sc. (Chem.), Professor, Lab. of Fibre and Cellulose
Technology, Åbo Akademi University, Åbo, Finland

Publisher

Paper Engineers' Association/Paperi ja Puu Oy

Paperi ja Puu Oy

Table of Contents

1	Raw materials.....	12
2	Pulping	187
3	Washing, screening and cleaning of pulp.....	382
4	Bleaching	457
5	Pulp drying principles and applications	600
6	Fibrelines.....	675
	Conversion factors.....	729
	Index.....	731

CHAPTER 1

Raw materials

1	Forests and non-wood fibre resources.....	16
1.1	Boreal forests	18
1.2	Plantation forests.....	19
1.3	Non-wood resources.....	21
2	Wood chemistry, morphology and ultrastructure.....	28
2.1	Macroscopic structure of wood	29
2.2	Tree growth	32
2.3	Cell types.....	33
	2.3.1 Cell wall layering.....	34
	2.3.2 Hardwood cells	38
	2.3.3 Pits	39
2.4	Reaction wood	41
	2.4.1 Softwood reaction wood.....	41
	2.4.2 Hardwood reaction wood.....	42
	2.4.3 Other notable special wood tissues	42
2.5	Chemical composition and distribution.....	43
	2.5.1 Gross composition.....	43
	2.5.2 Distribution of wood constituents	46
2.6	Chemistry of wood constituents	49
	2.6.1 Carbohydrates.....	49
	2.6.2 Lignin.....	55
	2.6.3 Lignin-carbohydrate complexes (LCC)	58
	2.6.4 Extractives	59
	2.6.5 Inorganic compounds.....	69
2.7	Non-wood chemistry, morphology and ultrastructure	70
	2.7.1 Botany	71

2.7.2	Morphology of bamboo and wheat straw.....	72
2.7.3	Polysaccharides.....	75
2.7.4	Lignin.....	76
2.7.5	Minor components.....	77
2.7.6	Chemistry of straw.....	78
2.7.7	Chemistry of bamboo.....	79
2.8	Analytical methods.....	81
2.8.1	Analytical objectives and methods.....	81
2.8.2	Importance of proper sampling, sample storage and pretreatments.....	82
2.8.3	Analysis of carbohydrates.....	83
2.8.4	Analysis of lignin.....	84
2.8.5	Analysis of extractives.....	85
2.8.6	Analysis of inorganic compounds.....	89
2.8.7	Direct summative analysis of wood.....	89
3	Wood processing.....	91
3.1	Measuring incoming wood raw material.....	92
3.1.1	Scanning image scaling.....	93
3.2	Wood storage arrangements and storage times at the mill site.....	94
3.2.1	Wood unloading.....	95
3.3	Deicing, cutting and feeding to debarking.....	96
3.3.1	Receiving conveyor.....	97
3.3.2	Deicing.....	97
3.3.3	Receiving deck.....	98
3.3.4	Slasher deck.....	99
3.3.5	Sorting.....	100
3.3.6	Waste handling.....	100
3.4	Debarking.....	101
3.4.1	Theory of debarking.....	101
3.4.2	Wood losses.....	106
3.4.3	Tumble debarking.....	106
3.4.4	Parallel debarking.....	108
3.4.5	Ring debarking.....	109
3.4.6	King debarking.....	110
3.4.7	Hydraulic debarking.....	111

CHAPTER 1

3.4.8	Debarking of small-diameter wood.....	111
3.4.9	Chain flail debarking	112
3.4.10	Debarking in a drum without bark slots	113
3.5	Bark and hog fuel handling	113
3.5.1	Dewatering of bark	115
3.5.2	Screening of bark.....	116
3.5.3	Shredding of bark	116
3.5.4	Pressing of bark.....	117
3.5.5	Storage of bark	119
3.5.6	Transport of bark.....	120
3.6	Chipping	120
3.6.1	Chipping theory.....	121
3.6.2	Chip size and density	124
3.6.3	Chipper construction	124
3.6.4	Chipper knives	128
3.6.5	Chipper feeding.....	129
3.7	Chip screening	130
3.7.1	Thickness screening, examples from model studies	131
3.7.2	Possible screening alternatives	132
3.7.3	Coarse screens	133
3.7.4	Gyrating screens	133
3.7.5	Disc screens	134
3.7.6	Roll screens	135
3.7.7	Bar screens.....	137
3.7.8	Wave screens.....	139
3.7.9	Air jet screener.....	140
3.7.10	Rechippers.....	140
3.7.11	Slicers.....	140
3.7.12	Chip conditioners	141
3.8	Chip storage and transport.....	144
3.8.1	Chip piles.....	148
3.8.2	Automatic chip piles.....	149
3.8.3	Chip silos	151
3.8.4	Aging chip silo	152

3.8.5	Chip transport to storage.....	154
3.8.6	Chip transport to digester.....	158
3.8.7	Handling of purchased chips	162
3.9	Water handling.....	163
3.9.1	Circulation water system.....	165
3.9.2	Thawing water system	165
3.10	Wood handling systems	166
3.10.1	Wood handling plant layout	167
3.10.2	Wood room layout	167
3.10.3	Screening layout	168
3.10.4	Chip storage layout	169
3.10.5	Process control and personnel plan	169
3.10.6	Raw material.....	171
	References	174

CHAPTER 2

Pulping

1	History of chemical pulping	190
1.1	Sulphite pulping	191
1.2	Sulphate (kraft) pulping	192
1.3	Development of digester systems	192
2	Pulping chemistry	195
2.1	Chemical pulping processes and variables	195
2.2	Principles of chemical pulping reactions	197
2.3	Advantages and drawbacks of kraft pulping	202
2.4	Advantages and drawbacks of sulphite pulping	202
2.5	Kraft method	203
2.5.1	General description of the kraft pulping process	203
2.5.2	Active chemicals	205
2.5.3	Delignification phases	207
2.5.4	Initial delignification	208
2.5.5	Bulk delignification	209
2.5.6	Residual delignification	209
2.5.7	Reactions with lignin	210
2.5.8	Reactions with carbohydrates	214
2.5.9	Reactions with extractives	221
2.5.10	Inorganic reactions	222
2.5.11	Chemical additives in kraft cooking	223
2.5.12	Polysulphide cooking	223
2.5.13	Anthraquinone cooking	224
2.5.14	Other additives	225
2.6	Sulphite pulping	226
2.6.1	General description of the sulphite pulping process	226
2.6.2	Active chemicals	228
2.6.3	The pH of sulphite cooking liquors	230
2.6.4	Reactions with lignin	232
2.6.5	Sulphonation	232
2.6.6	Hydrolysis	233

CHAPTER 2

2.6.7	Lignin condensation	234
2.6.8	Lignin reactions in acid and bisulphite pulping	234
2.6.9	Lignin reactions in neutral and alkaline pulping	236
2.6.10	Reactions with carbohydrates	236
2.6.11	Reactions with extractives.....	237
2.6.12	Formation of thiosulphate.....	238
2.6.13	Reactions during impregnation of chips.....	238
2.7	Chemistry in pre-hydrolysis and hydrothermal treatment of wood	239
2.8	Organosolv pulping methods.....	241
2.9	Chemistry and technology of the neutral sulphite semi-chemical (NSSC) process	248
2.9.1	NSSC pulping and its process variables.....	249
3	Chemical engineering principles in pulping.....	252
3.1	Pre-pulping process.....	253
3.2	Mass transfer and reaction kinetics.....	254
3.2.1	Mass, volume and density of chips.....	254
3.2.2	Mass transfer in kraft cooking.....	260
3.2.3	Steaming	260
3.2.4	Penetration	262
3.2.5	Diffusion	263
3.2.6	Reaction kinetics in kraft cooking	266
3.2.7	Kinetics of lignin reactions	266
3.2.8	Kinetics of carbohydrate reactions.....	269
3.2.9	Modelling of mass transfer and reaction kinetics	270
3.3	Compressibility of chip columns and their resistance to liquid flow.....	273
3.3.1	Compressibility of chips	273
3.3.2	Compressibility of chip columns.....	275
3.4	Process control variables in pulping	276
3.4.1	Liquor-to-wood ratio	277
3.4.2	Alkali charge	277
3.4.3	Sulphidity.....	277
3.4.4	Temperature, cooking time and H-factor	278
3.4.5	Rate of delignification.....	280
3.4.6	Selectivity of kraft cooking	282
3.4.7	Process optimisation.....	283
4	Pulping technology.....	285
4.1	Conventional pulping technology.....	285
4.1.1	Conventional batch cooking	285
4.1.2	Displacement batch cooking	290
4.1.3	Continuous-flow cooking systems.....	291
4.1.4	Conveyor-type continuous digesters.....	294

4.2	General principles of displacement batch process and equipment.....	295
4.2.1	General principles of displacement batch cooking	296
4.2.2	RDH and SuperBatch cooking methods	296
4.2.3	Other displacement batch cooking methods.....	298
4.3	Engineering principles of displacement batch cooking	300
4.4	Description of displacement batch cooking operations	304
4.4.1	Cooking cycle.....	307
4.4.2	Heat recovery.....	314
4.4.3	Soap separation	314
4.4.4	Malodorous gases	315
4.4.5	Control system	315
4.5	Recent developments in batch technology	317
4.6	Advantages and drawbacks of displacement batch cooking	321
4.7	General principles of continuous cooking processes and equipment.....	322
4.8	Description of continuous cooking systems and operations	325
4.8.1	Pre-steaming	328
4.8.2	Chip metering and feeding into process pressure	331
4.8.3	Top circulation lines and top separator	336
4.8.4	Impregnation zone	338
4.8.5	Primary heating zone	339
4.8.6	Screen design	342
4.8.7	Cooking and extraction zones	343
4.8.8	Counter-current washing.....	344
4.8.9	Blow dilution and cold blowing.....	346
4.8.10	Process gases.....	348
4.9	Modern continuous cooking processes.....	348
4.9.1	Compact Cooking.....	350
4.9.2	Lo-Solids pulping	356
4.10	Developments in the technology of continuous digesters.....	361
4.10.1	Diamondback chip bin.....	361
4.10.2	Lo-Level feed system	362
4.10.3	TurboFeed chip feeding system	362
4.10.4	Compact Feed chip feeding system	363
4.10.5	Low-level heat recovery	365
4.10.6	Downflow Lo-Solids cooking and diagonal screens	366
4.10.7	Digester flash systems	366
4.10.8	Rebuilding a Digester	368
4.11	Advantages and drawbacks of continuous cooking	371
	References	373

CHAPTER 3

Washing, screening and cleaning of pulp

1	Principles of washing	384
1.1	Flow in porous media.....	385
1.2	Mass transfer in pulp washing	391
1.3	Washing efficiency	395
1.4	Efficiency of different washing systems.....	405
2	Washing technology	407
2.1	Atmospheric diffuser — AD	408
2.2	Pressure diffuser — PD	411
2.3	Belt washer.....	415
2.4	Vacuum filters.....	416
2.5	Pressure filters.....	419
2.6	Wash presses	422
2.7	Presses	425
3	Washing systems	425
4	Screening	428
4.1	Typical impurities.....	428
4.2	Principles of screening.....	431
4.3	Screening mechanisms.....	432
4.4	Numerical characterisation	432
4.5	Screening equipment and operations	434
4.6	System example	435
4.7	Screening operations	437
5	Principles of cleaning	438
6	Screening and cleaning technology	441
6.1	Knot separation and washing	441
6.2	Fine screening	444

Washing, screening and cleaning of pulp

6.3	Rotor technology.....	445
6.4	Screen plates.....	446
6.5	Reject washing	447
6.6	Light reject removal	447
6.7	Thickeners.....	447
6.8	Cleaners	448
6.9	Post-cleaning equipment for bleached pulp.....	448
7	Screening systems	448
7.1	Example of screen room system for unbleached pulp.....	449
7.2	Post-screening.....	451
	References	452

CHAPTER 4

Bleaching

1	History of bleaching	460
2	Bleaching chemistry.....	467
2.1	Reactions in chlorine stages.....	467
2.1.1	Chemistry of chlorine in water.....	467
2.1.2	Reactions of chlorine with lignin.....	469
2.1.3	Calculating the amount of chlorine to apply on a pulp.....	470
2.1.4	Estimating the amount of AOX formed during a chlorine stage	471
2.1.5	Reactions of carbohydrates during chlorine stages	471
2.2	Reactions in chlorine dioxide stages.....	472
2.2.1	Reactions of chlorine dioxide with lignin.....	472
2.2.2	Formation of chlorine during chlorine dioxide bleaching	474
2.2.3	Active chlorine	474
2.2.4	Amount of AOX formed during chlorine dioxide delignification.....	475
2.2.5	Reactions of carbohydrates during chlorine dioxide bleaching	475
2.3	Reactions in oxygen stages	476
2.3.1	Reactions of oxygen with lignin	476
2.3.2	Reactions of carbohydrates during oxygen bleaching	476
2.4	Reactions in hydrogen peroxide stages	477
2.4.1	Effect of metal ions on hydrogen peroxide bleaching.....	477
2.4.2	Reactions of hydrogen peroxide with lignin.....	478
2.4.3	Reactions of carbohydrates during hydrogen peroxide bleaching.....	478
2.5	Reactions during alkaline extraction stages	479
2.5.1	Reactions of lignin during alkaline extraction stages.....	479
2.5.2	Reactions of carbohydrates during alkaline extraction stages.....	480
2.6	Reactions during ozone stages.....	481
2.6.1	Reactions of ozone with lignin	481

CHAPTER 4

2.6.2	Effect of pH on ozone decomposition.....	482
2.6.3	Effect of transition metal ions on ozone decomposition.....	482
2.6.4	Reactions of carbohydrates during ozone bleaching	483
2.7	Reactions during peracetic acid stages	484
2.7.1	Reactions of peracetic acid with lignin	484
2.7.2	Reactions of carbohydrates during peracetic bleaching	485
2.8	Reactions during xylanase treatment	485
2.9	Reactions of extractives during bleaching	485
3	Chemical engineering principles in bleaching	486
3.1	Mass transfer and reaction kinetics in bleaching.....	486
3.1.1	Mass transfer in bleaching	486
3.1.2	Reaction kinetics in bleaching.....	490
3.2	Rheology of fibre suspensions	495
3.3	Process unit operations in bleaching stages.....	499
3.3.1	Pumping of fibre suspensions	500
3.3.2	Examples of industrial pumping equipment.....	504
3.3.3	Mixing.....	511
3.3.4	Examples of industrial mixing equipment	513
3.3.5	Reactors and tanks	516
3.3.6	Examples of industrial reactors and tanks	520
4	Bleaching technology	524
4.1	Bleaching chemicals preparation and handling	524
4.1.1	Chlorine and caustic soda	524
4.1.2	Chlorine dioxide	525
4.1.3	Oxygen.....	533
4.1.4	Ozone	536
4.1.5	Hydrogen peroxide	539
4.1.6	Peroxy acids.....	543
4.1.7	Chemical island.....	544
4.2	Bleaching sequence design.....	545
4.2.1	Dominant technologies.....	546
4.2.2	Mill process without chlorine-containing chemicals.....	549
4.2.3	BAT terminology (Best Available Technology)	551

4.3	Oxygen delignification stages: O and OO	552
4.3.1	Process variables	553
4.3.2	Two-stage oxygen systems	555
4.3.3	Oxygen stage processes	557
4.4	Chlorine stage: C.....	558
4.4.1	Effect of chlorine process variables	558
4.5	Chlorine dioxide stages: D and hot D.....	559
4.5.1	Chlorine dioxide in delignification (D_0 stage).....	560
4.5.2	Modified D_0 stage: hot D_0 stage	562
4.5.3	Chlorine dioxide bleaching or brightening stages.....	564
4.6	Extraction stages: E, (EO), (EP) and (EOP).....	566
4.6.1	Effect of alkaline extraction process parameters.....	566
4.6.2	Extraction-stage processes	569
4.7	Hydrogen peroxide stages: P, (PO) and (OP)	569
4.7.1	Hydrogen peroxide-stage parameters.....	570
4.7.2	Hydrogen peroxide-stage processes.....	573
4.8	Ozone stages: Z, (ZD), (DZ) and (Ze).....	575
4.8.1	Effect of ozone-stage parameters.....	576
4.8.2	Combination of ozone and chlorine dioxide in one stage: (ZD) or (DZ)	579
4.8.3	Ozone-stage processes	580
4.9	Hot acid stage: A.....	584
4.10	Peracetic acid bleaching	585
4.11	Multi-chemical stages.....	585
4.12	Enzymes	586
5	Concluding remarks about bleaching	586
	References	588

CHAPTER 5

Pulp drying principles and applications

1	Introduction.....	602
1.1	Drying methods	602
1.2	Effect of drying on pulp quality.....	605
1.2.1	Tasks and requirements for pulp dryer section	606
1.3	Removal of water mainly by mechanical force.....	606
1.3.1	Theory of mechanical water removal.....	607
1.4	Removal of water by adding heat.....	614
1.4.1	Theory of heat transfer in a drying process	617
1.4.2	Special cases	619
1.4.3	Laboratory dewatering tests.....	625
1.5	General trends for pulp dryers.....	631
1.5.1	Novel technology.....	634
2	Pulp drying process and its unit operations.....	636
2.1	Pulp drying line.....	636
2.2	Web-based pulp dryers	637
2.2.1	Drum machine	637
2.2.2	Fourdrinier machine	638
2.2.3	Pick-up machine	639
2.2.4	Twin-wire machine.....	640
2.3	Important units in pulp drying machine	642
2.3.1	Headbox.....	642
2.3.2	Forming table.....	645
2.3.3	Wire presses	645
2.3.4	Press section	646
2.3.5	Press felts.....	648

2.4	Web-based dryer section	650
2.4.1	Air based web drying — airborne drying	650
2.4.2	Description of airborne dryer	650
2.4.3	Cylinder-based web drying — cylinder drying	653
2.4.4	Drying of different pulp grades	655
2.4.5	Cooling	656
2.4.6	Drying economy	657
2.4.7	Control	659
2.4.8	Maintenance and service	659
2.4.9	Drying machine accessories	660
2.5	Flash drying of pulp	663
2.5.1	Background	663
2.5.2	Description of Flash drying	664
2.5.3	Fluffing	665
2.5.4	Environmental aspects	666
3	Pulp web cutting and baling	666
3.1	Sheet cutting	668
4	Special cases	670
4.1	Wet-lap machine	670
4.2	Special pulps — drying of dissolving pulp	670
5	Notation	671
	Referenses	672

CHAPTER 6

Fibrelines

1	Background.....	676
1.1	The split between cooking, oxygen delignification and bleaching.....	677
1.2	Cooking	681
1.3	Oxygen delignification.....	685
1.4	Bleaching.....	686
1.5	Historic development of bleaching sequences	689
2	Factors influencing fibreline design	692
2.1	Environmental situation.....	692
2.2	Pulp mill size	694
2.3	Biorefinery aspects	695
3	Modern fibrelines	699
3.1	Softwood kraft pulp mills	701
3.2	Hardwood kraft pulp mills	703
3.3	Sulphite pulp mills	705
3.4	Non-wood pulp mills.....	707
4	Process control.....	710
5	Energy consumption and production.....	716
6	Trends in fibreline technology.....	720
7	Future trends.....	723
	References	725
