

Papermaking Science and Technology

a book series
covering the latest
technology and
future trends

Book 7

Recycled Fibre and Deinking

Second Edition

Totally updated version

Book editors

Höke, Ulrich, Dr.-Ing., Chairman of INGEDE (International Association of Deinking Industry) and Managing Director of Stora Enso Sachsen Mill
and

Schabel, Samuel, Prof. Dr.-Ing., TU Darmstadt, Head of the Department Paper Technology and Mechanical Process Engineering (PMV)

Publisher

Paper Engineers' Association/Paperi ja Puu Oy

Paperi ja Puu Oy

Table of Contents

1	Recovered paper statistics and definitions	11
2	Legislation.....	25
3	Collection systems, sources, sorting, quality and storage of recovered paper	41
4	Recyclability of paper and board products.....	87
5	Unit operations and equipment in recycled fibre processing	122
6	Design of recycled fibre processes for different paper and board grades.....	279
7	Additives	314
8	Papermaking potential of recycled fibre.....	434
9	Measuring and test methods	516
10	Final disposal of waste from recycled fibre-based papermaking and of non-recycled paper products.....	562
	Annex	647
	Glossary	654
	Index.....	660

CHAPTER 1

Recovered paper statistics and definitions

1	General	12
2	Grade classification and definitions	14
2.1	Recovered paper classification in Europe	14
2.2	Recovered paper classification in the United States.....	15
2.3	Recovered paper classification in other regions.....	15
2.4	Recovered paper terminology and definitions in Europe	15
3	Paper and board recycling chain	17
4	Statistics	17
4.1	General.....	17
4.2	Recovered paper collection.....	18
4.3	Recovered paper utilisation.....	19
4.4	Europe – recovered paper and other fibres.....	20
4.5	Use of recovered paper in different paper grades in Europe.....	21
4.6	Global recovered paper trade flows	22
	References	24

CHAPTER 2

Legislation

1	New EU Waste Directive – a valuable tool for paper recycling	26
2	Tasks for EU member states.....	26
3	Key points for the paper industry	27
4	Complementary actions and voluntary commitments by the industry	28
4.1	European Declaration on Paper Recycling.....	29
4.2	Guidelines on responsible sourcing and quality control.....	29
5	REACH and paper recycling.....	30
5.1	REACH Regulation.....	31
5.2	Recovered substances and REACH.....	31
5.3	Information: requirements and possibilities under REACH.....	33
6	Residues from paper recycling, Landfill Directive and prevention.....	34
7	Packaging and packaging waste directive.....	36
8	Waste Shipment Regulation	37
9	Recycling and food contact legislation.....	37
	References	39

CHAPTER 3

Collection systems, sources, sorting, quality and storage of recovered paper

1	Introduction.....	42
2	Collection systems and equipment.....	44
2.1	Pre-consumer recovered paper	44
2.2	Post-consumer recovered paper	44
	2.2.1 Pick-up systems	45
	2.2.2 Drop-off systems	45
2.3	Efficiency of different collection systems.....	46
3	Sources of recovered paper	47
3.1	Fibre flow in Western Europe.....	48
3.2	Recovered paper potential	49
4	Sorting of recovered paper.....	51
4.1	Manual sorting.....	51
4.2	Automatic sorting.....	53
	4.2.1 Preliminary coarse separation	54
	4.2.2 Further automation by fine separation	57
5	Handling of recovered paper.....	69
5.1	Loose recovered paper.....	69
5.2	Baled recovered paper	69
5.3	Shredding of filed paper.....	70
5.4	Guidelines for responsible sourcing.....	70
6	Quality characteristics of recovered paper	71
6.1	Prerequisites for quality control	71
6.2	Moisture content.....	72
6.3	Ash content and Schopper-Riegler value	73
6.4	Composition and other characteristics	74
	6.4.1 Brown grades.....	74
	6.4.2 White grades.....	77
7	Storage of recovered paper.....	82
	References	84

CHAPTER 4

Recyclability of paper and board products

1	General aspects of recyclability	88
2	Technical aspects of recyclability	89
2.1	Non-paper components in recovered paper	89
2.2	Repulpability	90
2.3	Removability of unwanted material	90
	2.3.1 Inks and toners	90
	2.3.2 Adhesive applications.....	90
2.4	Suitability for contact with foodstuffs	91
3	Deinkability	91
3.1	Deinkability of different printed products.....	97
3.2	Deinkability by printing technology.....	98
	3.2.1 Offset prints	99
	3.2.2 Rotogravure prints.....	104
	3.2.3 Waterbased flexographic newspapers	106
	3.2.4 Toner prints.....	109
	3.2.5 Inkjet prints.....	111
	3.2.6 Solid ink prints.....	114
4	Removability of adhesive applications	114
	References	120

CHAPTER 5

Unit operations and equipment in recycled fibre processing

1	General overview	126
2	Fluid mechanics of pulp suspensions.....	126
3	Introduction to the rheological effects and handling of fibre suspensions	130
4	Evaluation and modelling of separation processes	131
5	General overview of unit operations.....	136
6	Slushing and repulping	141
6.1	Basics.....	141
6.2	Machinery.....	145
6.2.1	HC and MC pulpers	146
6.2.2	LC pulpers	148
6.2.3	Drum pulpers.....	150
6.3	Deflaking	153
6.3.1	Objectives and system integration.....	153
6.3.2	Physical principles	153
6.3.3	Machinery.....	154
7	Screening	156
7.1	Objectives and system integration.....	156
7.2	Physical principles	157
7.2.1	Barrier and probability screening.....	157
7.3	Basic screening machine designs	158
7.4	Basic physical mechanisms in pressure screens.....	159
7.4.1	Passage of fibres through apertures.....	160
7.4.2	Cleaning of screen baskets by flushing back or shear forces.....	162
7.4.3	Rejecting contaminants.....	166
7.5	Modelling pressure screens and screening systems.....	167
7.5.1	Modelling of single pressure screens	167
7.5.2	Modelling of screening systems	170

7.6	Machinery and design variations.....	173
	7.6.1 Coarse screening	173
	7.6.2 Fine Screening	176
7.7	Screening results.....	179
	7.7.1 Individual machines	179
	7.7.2 Screening systems.....	182
	7.7.3 Screening deficiency	185
	7.7.4 Thickening	186
	7.7.5 Deflaking	186
8	Separation in centrifugal field.....	187
8.1	Objectives and system integration.....	187
8.2	Basic physical principles	189
	8.2.1 Effects of design parameters.....	193
	8.2.2 Operation modes.....	196
8.3	Machinery and operation	197
8.4	HC cleaners	198
8.5	MC cleaners.....	200
8.6	LC Cleaners	200
	8.6.1 Cleaner systems	203
	8.6.2 Final-stage cleaners.....	204
	8.6.3 Centrifugal cleaners with rotating housing (centrifuges).....	205
	8.6.4 Abrasion	206
9	Fibre fractionation	206
9.1	Reasons and objectives for fibre fractionation	207
9.2	Equipment and processes for fibre fractionation.....	207
	9.2.1 Fractionation equipment available at industrial scale.....	209
	9.2.2 Fractionation equipment available at pilot scale	209
10	Flotation	210
10.1	Objectives and system integration.....	210
	10.1.1 Selective flotation.....	210
10.2	Principles.....	212
	10.2.1 Prerequisites for good deinking results.....	212
10.3	Flotation process	213
	10.3.1 Probability mechanism.....	213
	10.3.2 Quantity and size of bubbles	213

CHAPTER 5

- 10.3.3 Collision between bubbles and particles214
- 10.3.4 Attachment214
- 10.3.5 Stable transport215
- 10.3.6 Bubble formation and motion215
- 10.3.7 Bubble generation.....216
- 10.3.8 Relative velocity216
- 10.4 Typical operating conditions.....217
- 10.5 Flotation cells and their operating principles218
 - 10.5.1 Characteristics of different deinking flotation cells.....218
 - 10.5.2 Deinking flotation cells on the market219
 - 10.5.3 Foam deaeration222
- 10.6 Main quality criteria for deinked pulp223
- 10.7 Laboratory cells224
 - 10.7.1 Total flotation225
 - 10.7.2 Prerequisites for good water purification226
 - 10.7.3 Characteristics of different dissolved air flotation devices.....227
- 10.8 New developments in deinking technology.....228
 - 10.8.1 Combination of flotation deinking with advanced washing technology228
 - 10.8.2 Optimisation for flotation of water-based printing inks and water purification.....229
- 11 Dewatering.....230**
 - 11.1 Objectives and system integration.....230
 - 11.2 Principles.....231
 - 11.3 Machinery and effects234
 - 11.3.1 Belt and drum filters.....234
 - 11.3.2 Disc filters.....235
 - 11.3.3 Screw press.....236
 - 11.3.4 Other kinds of dewatering machinery237
- 12 Washing.....238**
 - 12.1 Objectives and system integration.....238
 - 12.2 Principles.....239
 - 12.3 Machinery.....244
 - 12.3.1 Belt filter type machines.....244
 - 12.3.2 Disc thickeners246
 - 12.3.3 Spray filters247
 - 12.3.4 Pressure screen type washers.....247

13	Dispersion and kneading.....	248
13.1	Objectives and system integration.....	248
13.2	Physical principles	249
13.2.1	High-speed dispersing	249
13.2.2	Low-speed kneading.....	250
13.3	Machinery and operation	250
13.3.1	Disc dispersers	251
13.3.2	Conical dispersers	252
13.3.3	Kneaders	253
13.4	Performance of dispersers and kneaders	254
14	Refining	255
14.1	Objectives and system integration.....	255
14.2	Physical principles	257
14.2.1	LC refining	257
14.2.2	HC refining.....	259
14.3	Machinery and design versions.....	259
14.3.1	LC refining	259
14.3.2	HC refining.....	261
14.4	Refiner performance	262
14.4.1	Refining of recycled fibre pulp for packaging papers	262
14.4.2	Refining of recycled-fibre pulp for printing and writing papers.....	263
15	Change in values on refining.....	264
16	Mixing and storing.....	265
16.1	Objectives.....	265
16.2	Principles.....	265
16.2.1	Mixing.....	265
16.2.2	Storing and prevention of demixing	265
16.3	Machinery.....	266
16.3.1	Mixing.....	266
16.3.2	Storing and prevention of demixing	266
16.3.3	Preventing entanglement of impurities	267
16.3.4	Storing suspensions with high stock consistency	267
17	Acknowledgements	267
	References	268

CHAPTER 6

Design of recycled fibre processes for different paper and board grades

1	Introduction.....	280
2	Design principles	280
2.1	Efficiency and costs	280
2.2	Methodology of stock preparation process design	282
	2.2.1 Initial design concept development	282
	2.2.2 Design engineering	284
2.3	Modelling and simulation	285
	2.3.1 Balances	285
	2.3.2 Software tools	285
	2.3.3 Optimisation.....	287
3	Grade-specific process design	288
3.1	Printing and writing grades	288
	3.1.1 Process for newsprint, SC and LWC grades	288
3.2	Market deinked pulp	294
3.3	Tissue.....	295
3.4	Packaging paper grades	296
	3.4.1 Testliner	297
	3.4.2 Corrugating medium	299
3.5	Board grades	299
4	Water and reject management.....	302
4.1	Reject and sludge treatment	302
4.2	Water management	304
5	Evaluating the cost-effectiveness of process layout options	308
5.1	Technical aspects to be covered in the evaluation	308
5.2	Evaluation of process layout options for packaging papers	309
	References	312

CHAPTER 7

Additives

1	Deinking Chemicals	316
1.1	Objective of deinking chemistry	316
1.2	Method of ink removal	316
1.3	Requirements for successful ink removal	317
1.4	Chemistry for ink detachment	320
1.4.1	Function of caustic soda.....	321
1.4.2	Function of silicate.....	322
1.4.3	Function of hydrogen peroxide	326
1.5	Chemistry for ink removal by flotation	328
1.5.1	Collector function	328
1.5.2	Fatty acids	328
1.5.3	Oleic acids	334
1.5.4	Soap pellets	334
1.5.5	Fatty acid and calcium soap emulsions	335
1.5.6	Carryover of fatty acids / soaps	335
1.5.7	Silicone derivatives	336
1.5.8	Synthetic collectors / surfactants	336
1.5.9	Choice of a suitable collector.....	337
1.6	Chemistry for ink removal by washing.....	337
1.6.1	Synthetic surfactants	338
1.7	Further aspects.....	338
1.7.1	Foam control in flotation units	338
2	Bleaching of deinked pulp	339
2.1	Importance of bleaching.....	339
2.1.1	Wood-containing DIP.....	340
2.1.2	Wood-free DIP.....	341
2.1.3	Special aspects of DIP bleaching.....	342

2.2	Lignin-preserving bleaching.....	346
2.2.1	Peroxide bleaching (P).....	347
2.2.2	Dithionite bleaching (Y).....	363
2.2.3	FAS bleaching (FAS).....	368
2.2.4	Combined bleaching stages.....	372
2.3	Lignin-degrading bleaching.....	377
2.3.1	Bleaching with chlorine-containing chemicals.....	378
2.3.2	Bleaching with oxygen chemicals.....	381
2.4	Fibre fractionation in DIP bleaching.....	392
2.5	Other effects of bleaching.....	394
2.5.1	OBA destruction.....	394
2.5.2	Colour stripping.....	395
3	Process water treatment.....	403
3.1	Dissolved air flotation (DAF).....	405
3.1.1	Microflotation mechanism.....	405
3.1.2	Chemical concepts of microflotation.....	406
3.1.3	Principal design parameters of industrial plants.....	407
3.1.4	Achievable clear water quality.....	407
3.1.5	DAF system design.....	409
3.2	Saveall (Filtration or sedimentation).....	410
3.3	Defoamers.....	410
3.4	Biocides.....	411
3.5	Special additives.....	411
4	Stickies control.....	411
4.1	Detackification by minerals.....	412
4.2	Detackification by polymers.....	414
4.3	Fixation.....	414
4.4	Other options.....	416
5	Enzymatic treatment of recycled fibres.....	417
5.1	Upgrading of recycled fibres.....	417
5.2	Enzymatic deinking.....	419
	Recerences.....	420

CHAPTER 8

Papermaking potential of recycled fibre

1	Differences between virgin and recycled fibre	436
1.1	Introduction	436
1.2	Effects of recycling on chemistry and morphology of fibres	437
1.2.1	Hornification of fibres during drying and recycling	437
1.2.2	Changes in fibre morphology and flexibility	441
1.2.3	Effects of chemical conditions on flexibility of fibres	445
1.2.4	Changes in surface chemistry of fibres.....	446
1.3	Effects of recycling on pulp sheet properties	448
1.3.1	Effects on strength properties in recycling	449
1.3.2	Effects on other properties	451
1.4	Validity of experimental simulations of paper recycling	452
1.4.1	Design of recycling experiments.....	453
1.4.2	Chemical conditions in recycling experiments	454
1.4.3	Results of multiple recycling experiments.....	454
2	Recycled fibre quality related to remaining contaminants and inks.....	456
2.1	Classification of contaminants.....	457
2.2	Techniques for removing contaminants	459
2.3	Effects on RCF quality	461
2.3.1	Effects of residual ink particles.....	461
2.3.2	Effects of coloured fibres.....	463
2.3.3	Effects of stickies	463
2.3.4	Effect of fillers.....	464
2.3.5	Effects of other detrimental substances.....	465
2.4	Modelling of age distribution of RCF	467
2.5	One-parameter model.....	469
2.5.1	Multi-parameter model	472

3	Recycled fibre in papermaking	475
3.1	General aspects	475
3.2	Downgrading and upgrading of recovered paper	476
	3.2.1 Downgrading	476
	3.2.2 Upgrading	477
3.3	Effects of deinking process yield on pulp characteristics	477
	3.3.1 Losses of fines and mineral pigments in deinking process	478
	3.3.2 Fibre yield in deinking flotation.....	479
	3.3.3 Effect of flotation on strength properties.....	480
3.4	Improving papermaking potential of RCF by mechanical treatment.....	480
	3.4.1 Effects of refining on mechanical fibres.....	481
3.5	Effects of refining on deinked pulp	482
3.6	Effect of refining on hornified chemical fibres.....	483
	3.6.1 Effect of chemical conditions on refining results.....	484
	3.6.2 Effect of elevated temperature on RCF during dispersing or refining.....	485
	3.6.3 Effect of high-consistency treatment on curl of RCF	486
3.7	Effects of recycled pulp on paper machine wet-end chemistry	487
	3.7.1 Carryover of deinking chemicals	487
	3.7.2 Return of used wet-end chemicals back to papermaking	489
3.8	Reduction of water consumption in RCF processes	490
	3.8.1 Characteristics of anionic trash derived from recycled pulps.....	491
	3.8.2 Chemical oxygen demand (COD) derived from recycled pulps.....	493
	3.8.3 Effects of dissolved inorganics in recycled pulps	494
	3.8.4 Removal of dissolved and colloidal material from recycled fibre circuits	496
3.9	Runnability characteristics of deinked pulp	498
	3.9.1 Effect of DIP on dewatering in manufacture of printing grades.....	498
	3.9.2 Performance of recycled chemical pulp as reinforcement fibre	498
3.10	Effects of growing use of RCF in high-quality of printing paper grades	500
	3.10.1 Effects of increasing recycling rate on quality of newsprint.....	501
	3.10.2 Deinked pulp in magazine paper grades.....	502
3.11	Quality potential of RCF derived from office paper	503
3.12	Challenges in manufacturing packaging grades from RCF furnishes.....	505
	3.12.1 Current and future trends	505
	3.12.2 Optimisation of refining for OCC pulps.....	505
	3.12.3 Challenges for strength properties of packaging grades	507
	References	509

CHAPTER 9

Measuring and test methods

1	Test methods and specifications	518
2	Deinking test methods and deinkability assessment	518
2.1	Optical parameters of deinked pulp.....	518
2.1.1	Measurement of spectral reflectance and brightness.....	518
2.1.2	Colour shade.....	520
2.1.3	Effective residual ink concentration (ERIC).....	522
2.2	Particle measurement by image analysis.....	524
2.3	Yield of deinking processes.....	530
2.4	Assessment of print product recyclability	531
2.5	Assessment of deinkability.....	532
2.5.1	Early approaches	532
2.5.2	The five parameter model	533
2.5.3	Deinkability scores.....	534
3	Stickies test methods and assessment of stickies removal ability	536
3.1	Macrostickies	537
3.1.1	INGEDE Method 4.....	537
3.1.2	TAPPI “pick-up” method.....	538
3.1.3	INGEDE Method 12.....	539
3.1.4	INGEDE Method 13.....	540
3.2	Micro- and other small stickies	540
3.2.1	PMV method	541
3.2.2	Deposition propensity of adhesives in paper machine dryer section.....	542
3.2.3	Stickies deposition tendency tests in wet conditions.....	542
3.3	Other sticky test methods	545
3.3.1	FINAT test method FTM 19	545
3.3.2	TLMI Method.....	545
3.3.3	INGEDE Method 6.....	546
3.4	Assessment scheme for removability of adhesive applications	546

4	Other methods to test and assess recyclability	547
4.1	Determination of non-paper components	547
4.2	PTS Method PTS-RH 021/97	548
5	Entry inspection of recovered paper.....	549
5.1	Entry inspection of sorted graphic paper for deinking.....	549
5.2	Equipment for sampling	549
	5.2.1 Sampling of baled recovered paper	549
	5.2.2 Sampling of loose recovered paper	551
	References	553

CHAPTER 10

Final disposal of waste from recycled fibre-based papermaking and of non-recycled paper products

1	Categories of paper mill and household waste.....	564
2	Use and final disposal of solid waste from recycled fibre-based papermaking.....	566
2.1	Solid waste composition and characteristics	567
2.1.1	Rejects.....	568
2.1.2	Deinking sludges.....	569
2.2	In-plant pre-treatment	573
2.2.1	Dewatering	573
2.2.2	Drying.....	574
2.3	Energy recovery in internal and external combustion plants	576
2.3.1	Grate combustion.....	578
2.3.2	Fluidised bed combustion.....	579
2.3.3	Multiple-hearth combustion	581
2.3.4	Available combustion technologies.....	582
2.3.5	Emissions	582
2.3.6	Composition and use of ash	586
2.3.7	Co-firing of sludges and rejects.....	587
2.4	Composting and agricultural use.....	588
2.4.1	Composting conditions.....	588
2.4.2	Composting processes.....	590
2.4.3	Compost applications.....	592
2.4.4	Composting of rejects and sludges.....	593
2.4.5	Agricultural use.....	594
2.5	Use in other industries	595
2.5.1	Cement production.....	595
2.5.2	Brick production.....	597

Final disposal of waste from recycled fibre-based papermaking and of non-recycled paper products

2.6	Landfilling.....	599
2.6.1	Types of landfill.....	599
2.6.2	Landfill gas generation.....	600
2.6.3	Leakage from landfill.....	601
2.6.4	Landfill sealing systems.....	602
2.6.5	Landfilling of waste from recovered paper processing plants.....	603
2.7	New developments.....	603
2.7.1	Wet oxidation processes.....	603
2.7.2	Filler recovery from combustion ash.....	607
2.7.3	Fermentation processes.....	607
2.7.4	Hydrolysis processes.....	608
2.7.5	Pyrolysis processes.....	608
2.7.6	Production of cat litter and absorbent materials.....	609
3	Use and final disposal of non-recycled paper products.....	609
3.1	Landfilling of non-recycled paper in the disposal of MSW.....	610
3.2	Composting of non-recycled paper as a component of household biowaste.....	611
3.3	Incineration of non-recovered paper as a component of MSW.....	612
3.4	Incineration of non-recycled paper.....	613
3.4.1	Non-recycled paper as a biofuel.....	614
3.4.2	Pre-treatment of recovered paper as a biofuel.....	615
3.4.3	Emissions.....	616
4	Waste water from recycled fibre-based papermaking and waste water treatment.....	618
4.1	Characterisation of untreated waste water.....	619
4.2	Waste water treatment.....	620
4.2.1	Suspended solids removal.....	622
4.2.2	Biological treatment.....	623
4.3	Characterisation of treated waste water.....	631
4.4	Closed water circuits.....	633
4.4.1	Removal of calcium from process water.....	640
4.4.2	Use of scaling inhibitors.....	640
4.4.3	Controlled precipitation of calcium carbonate.....	640
4.4.4	Future development.....	641
	References.....	642
