In-Line Die-Cutting of the Past

- Few FFG’s had in-line die-cutters
- Long setups
- Open/Close FFG’s could die-cut from the top with bottom printers
In-Line Die-Cutting Today

- More prevalent
- Quicker setups with new technology
- Fixed Frame FFG’s are top print, bottom die-cut
- Scrap removal continues to be a problem
The Oscillating Stripper

- 2 Meter section immediately following the die-cutter
- Unique to the JS Folder FFG
The Oscillating Stripper

- More complex die-cuts
- Improved scrap removal
- Wheel, brush & blower combination
- Sheet transfer accuracy
