Full-Text Articles:

Cluster Rule compliance tools: predicting kraft mill VOCs

Part 1. Mill applications
Yongxiang Gu and Lou Edwards .................................................................1

Part 2. Methanol generation models
Yongxiang Gu, Lou Edwards, Junyong Zhu
and Xinsheng Chai ..................................................................................14

Part 3. Methanol equilibrium calculations
Yongxiang Gu, Lou Edwards, Junyong Zhu,
Pi-Hsin Liu and Xinsheng Chai .................................................................28

Part 4. Mill validated air emission models
Yongxiang Gu and Lou Edwards .................................................................39

Evaluating treatment processes to reduce metals concentrations in pulp and paper mill wastewaters to extremely low values
Douglas T. Merrill, C. Van Maltby, Kevin Kahmark,
Matthew Gerhardt, and Henryk Melcer .......................................................52

Principles of the quantification of dissolved organic material in TMP process waters using a 5-component system
Marianne Lenes, Hans Hoel and Lennart Bodén ..................................................73

NSSC process optimization, part 1: pulping, pulps, and spent liquors
Maria Christina Area, Fernando E. Felissia, Alberto Venica,
and Jacques L. Valade ...................................................................................87

Operating experiences with a Lo Solids™ pulping process at Willamette Industries’ Johnsonburg mill
David M. Stanley and Bruno S. Marcoccia ..........................................................100

Advanced sequence kappa factor control, part 1: DE kappa control
Jukka Perala and Ray Kirby .............................................................................113

Electrochemical delignification of softwood pulp with violuric acid
Christoph Padthberg, Hee-Chol Kim, Markus Mickel, Sandra Bartling,
and Norbert Hampp .......................................................................................124

Predictive modeling of high-pressure NAEM-catalyzed (HP-ALPULP) organosolv pulping of spruce
A. Hossein Lohrasebi and Laszlo Paszner .........................................................136

Characterization of carboxylic acids during kraft and Superbatch pulping
Johanna Buchert, Maija Tenkanen, and Tarja Tamminen ....................................153

Natural variability and the second crop
John V. Hatton ................................................................................................162
Studies of the dynamic compressibility of water-saturated fiber networks

Hannes Vomhoff ...............................................................................................................................174

Laboratory study of shoe pressing for low-basis-weight paper applications

Paul Phelan, Fredrick Ahrens, and Gary Worry .............................................................................193
